# sustainability

committed to reducing our  
impact on the environment

## LSBU's Sustainability Agenda

London South Bank University (LSBU) is engaging with the sustainable development agenda. We are committed to reducing our impact on the environment and investing in our human and social capital.

"Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs."

**(Bruntland, 1987)**

Caring for our planet and improving social well-being are the most important challenges we face. That is why LSBU believes it is time to tell people what we are doing.

We created our Sustainable Development Group, with the mission:

"To improve the sustainable development of the University by promoting and supporting the implementation of relevant sustainable measures and increasing awareness amongst all LSBU stakeholders"

Our Sustainable Development Policy lays out a broad set of commitments in terms of:

- Curriculum
- Policy
- University management
- Procurement
- Estates

We are increasing the environmental and social awareness of our staff and students and promoting the University's contribution towards sustainable development through curriculum, research, consultancy, governance and interaction with the wider community. Visit <http://www.lsbu.ac.uk/about/sustainability.shtml> for more details of our activities and policies.

Being sustainable is not just about saving resources and the planet for future generations, it is also about our societies and our economies. It affects every aspect of our lives and the lives of others. LSBU is working with higher education partners, businesses and the local community to make a real difference to all our lives.

## What else is LSBU doing?

- 100% of our waste is weighed, then recycled or reused (to produce energy at CHP plant)
- LSBU is Fairtrade accredited
- Implementing our sustainable travel plan
- Improving building energy efficiency to reduce our carbon footprint
- Purchasing through our sustainable procurement policy
- Embedding sustainability throughout the curriculum
- Developing a staff training programme in sustainable practices
- Supporting Government, NGOs and businesses through research and consultancy
- Reducing and offsetting resource usage, including paper, water, CDs
- Working with local regeneration projects like the Elephant & Castle area
