<b>B. Course Aims and Features</b>		
<b>Distinctive features of course</b>	MSc Advanced Chemical Engineering explores topics required for a successful career as a chemical engineer where the student gain solid knowledge in reactor & process design, process simulation, energy integration and materials engineering. The course has been developed in response to relevant industry needs and it reflects our strength in research and teaching within this area. The MSc programme benefits from the MEng material for the Chemical Engineering programme to enhance the student experience through greater class sizes and shared learning experiences.	
<b>Course Aims</b>	<p>The MSc Advanced Chemical Engineering aims to:</p> <ul style="list-style-type: none"> <li>• Produce graduates trained in the core discipline of chemical engineering including energy, materials and reaction engineering, and process management.</li> <li>• To produce MSc graduates who are equipped with the relevant understanding, skills and knowledge required to operate effectively in the chemical engineering sector.</li> <li>• Produce graduates capable of contributing to the profession of chemical engineering in the context of modern industrial practice and sustainable development.</li> <li>• To enable students to develop an understanding of relevant disciplines associated with chemical engineering in order to operate in multidisciplinary teams.</li> <li>• Develop students' knowledge of mathematics, applied sciences, engineering methods and safety, in support of the central themes of the course.</li> <li>• Develop students' intellectual and reasoning powers, their ability to perceive the broader perspective, and their problem-solving skills through the integration of a broad range of subject material.</li> <li>• Teach students to communicate clearly, to argue rationally and to draw conclusions based on an analytical and critical approach to data and systems.</li> </ul>	

	<ul style="list-style-type: none"> <li>To encourage the development of personal qualities and professional competences of chemical engineers.</li> </ul>
<b>Course Learning Outcomes</b>	<p>A. <u>Students will have knowledge and understanding of:</u></p> <p>A1. Mathematics, science and engineering underlying the practice of chemical engineering.</p> <p>A2. The interactions involved in chemical engineering systems and analytical and computational tools to deal with these. Mathematical and computer models in the design and analysis of chemical equipment and processes, and an appreciation of their benefits and limitations.</p> <p>A3. The scope of chemical engineering from design to simulation of unit operations and processes. The professional and ethical responsibilities in the global and social context of engineering. A thorough understanding of current practice in chemical engineering and its limitations and some appreciation of likely new developments. Current technological and commercial challenges and development of the chemical industry.</p> <p>A4. The economic, management and statutory requirements involved in the practice of chemical engineering. The business practices and how these may be applied appropriately.</p> <p>B. <u>Students will develop their intellectual skills such that they are able to:</u></p> <p>B1. Use mathematics, science and engineering to support theoretical and practical analysis of complex chemical processes.</p> <p>B2. Employ concepts from the applied and engineering sciences to design and evaluate chemical processes. Use scientific principles in the modelling and analysis of chemical engineering processes.</p> <p>B3. Show awareness of the significance of safety in design work. Critically analyse commercial risks through understanding the basis of such risks.</p> <p>B4. Use fundamental knowledge to investigate new and emerging technologies.</p> <p>B5. Extract data pertinent to an unfamiliar problem, and apply in its solution using computer based tools when appropriate.</p> <p>B6. Integrate engineering principles of a multi-disciplinary nature in order to propose solution to problems.</p> <p>B7. Apply management and business practices appropriately.</p> <p>B8. Produce engineering solutions, which are consistent with ethical and social responsibilities.</p> <p>C. <u>Students will acquire and develop practical skills such that they are able to:</u></p> <p>C1. Use computers and current software in quantitative and analytical work, as well as general information technology for communication and data</p>

	<p>handling. Use software commercially available in the simulation of chemical processes.</p> <p>C2. Plan and manage work both individually and in teams. Communicate effectively using appropriate media.</p> <p>C3. Evaluate designs and systems to identify areas of potential hazard and environmental threat and propose improvements.</p> <p>C4. Use laboratory, engineering and measuring equipment to provide data in support of theoretical understanding.</p> <p>C5. Analyse and solve engineering problems, often based on limited and imperfect data. Critically apply scientific evidence based methods in the solution of problems.</p> <p>C6. Apply principles of project management.</p> <p><u>D. Students will acquire and develop transferrable skills such that they are able to:</u></p> <p>D1. Demonstrate literacy and numeracy skills. Manipulate, sort and present data in forms useful for understanding. Select, interpret and validate data, identifying possible errors and inconsistencies.</p> <p>D2. Communicate clearly the findings of experiments, projects and other assignments using written reports, oral and visual presentations.</p> <p>D3. Work effectively in a team, recognising the roles played by different team members.</p> <p>D4. Manage own responsibilities, including time and task management.</p> <p>D5. Undertake self-development and the capacity to learn.</p> <p>D6. Identify and solve problems in familiar and unfamiliar situations.</p> <p>D7. Adapt to change in the working environment.</p>
--	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

### **C. Teaching and Learning Strategy**

#### **A. Teaching and learning strategy for knowledge outcomes**

All the course lectures, tutorials and laboratory practical work will deliver knowledge and understanding described in A1. The knowledge and understandings of A2, are strongly delivered in the modules: Advanced Reaction Engineering, Safety Health and Environment and Multiphase Flow. These are further developed and delivered as an important outcome of the Dissertation Project. The students will gain knowledge described in A3 in the modules; Safety, Health and Environment, Process Management or Emerging Energy and Sustainability. The A3 learning outcome is also an important feature in the Dissertation Project.

Much of the understanding described in A4 will be gained in Process Modelling and Simulation and Advanced Reaction Engineering and Process Management or Emerging Energy and Sustainability or Advanced Materials Engineering where various engineering management tools will be taught. In all modules, an understanding of health & safety practice are featured throughout the course, in particular for the practical work undertaken.

The MSc students are encouraged to attend the seminars/event such as those organised by externally by IChemE and research seminars at LSBU. Invited guest lectures from industry will deliver presentations at LSBU on relevant and current topics.

## **B Teaching and learning strategies for intellectual skills**

Most of the curriculum of the MSc course will support the intellectual learning skills outcomes described in B1-B8. The intellectual skills are developed through lectures, individual and group problem-based work, including the Dissertation Project. In private study, students will develop their engineering intellectual skills by report writing, and addressing problems set by the tutor or in past examinations, case studies, and projects.

The learning outcomes described in B5 are developed in computer laboratory sessions embedded in modules and projects (Multiphase Fluid Flow and Process Modelling and Simulation)

## **C. Teaching and learning outcomes for developed practical skills**

Computing skills for engineering and science, C1, is expanded in the course where students will learn the principles and study the application of specialist engineering packages. (Aspen HYSYS, Aspen Energy Analyzer, STAR CCM+)

C2 and C3 will be major part of small projects embedded in modules across the programme.

C4 will be acquired in practical laboratory sessions such as in Advanced Materials Engineering Coursework in modules like Process Modelling and Simulation and the Dissertation project will be open-ended, developing C5 and C6.

## **D. Teaching and learning outcomes for developed transferable skills**

The outcomes described in D1 are developed in practical work and design tasks where students for example obtain data from handbooks and computer databases, and use it in calculations, graphical solutions and computer applications.

The transferable skills outcomes described in D2 and D3 are developed by report-writing and team-working exercises and in laboratory and project-oriented modules. D4-D6 developed along the course but in particular in the Dissertation module, which is research based

## **E. Assessment**

### **A Assessment for knowledge and understanding outcomes**

Content, knowledge and understanding of the taught material are assessed either by 100% coursework, or combined coursework and examination (typical 40% CW - 60% exam) Summative coursework will be based on the practical or theoretical content of the module, as either essays, reports, group work, oral presentations, production of posters, and in-class tests.

Examinations normally take the form of a 2 to 3-hour unseen end-of-semester paper pre examined by external exam board.

Formative assessments will include tutorials exercises, computer simulation exercises, discussions in classroom, questions and answer sessions, peer discussions, observations, reflection on learning, presentation rehearsals

**B Assessment for intellectual skills outcomes**

Intellectual skills are normally assessed through formal examinations and student presentations. Preparation of laboratory and project reports are also considered as assessment of the developed intellectual skills.

**C Assessment of practical skills**

C1 will be assessed through computing assignments, C2-C6 as parts of coursework assessment, and C4 in the marking of laboratory reports. The outcomes described in C5-C6 are assessed in project based coursework and will be marked for the critical approach to problem-solving.

**D Assessment for developed transferable skills**

A variety of methods will be used to assess transferable skills. These assessments include computer laboratory exercises and simulations, oral presentations, written reports, and management in the Dissertation.

D1 is assessed in many of the written examination papers, and reports, and further as constructive feedback on the quality of written reports, D2. The effectiveness of teamwork, D3, is assessed as an element in several coursework tasks throughout the course. D4-D6 is heavily assess in the research based Dissertation module.

**E. Academic Regulations**

The University's Academic Regulations apply for this course.

[http://www.lsbu.ac.uk/\\_data/assets/pdf\\_file/0008/84347/academic-regulations.pdf](http://www.lsbu.ac.uk/_data/assets/pdf_file/0008/84347/academic-regulations.pdf)

For course specific protocols please refer to the School/Divisional protocol document.

**F. Entry Requirements**

The MSc Advanced Chemical Engineering offers a specialization route for chemical engineering graduates, or a conversion route for non-chemical engineering graduates. The standard requirement for admission will be a 2.2 or higher first degree in engineering or a physical science from a UK university, or equivalent degree from overseas. It is considered that a pure software engineering background would not give suitable cover, but that all other branches of engineering will be acceptable. Entrants from a science route must, by their degree or otherwise, be sufficiently prepared for the mathematical content of the course. Applicants must also meet the University's standard requirement for English, i.e. IELTS 6.5, TOEFL 580 or equivalent.

**G. Course structure(s)****Course overview MSc Advanced Chemical Engineering. FT and PT**

Full time students (FT) are offered options in Process Management, Emerging Energy and Sustainability, Advanced Materials Engineering, Process Control and Instrumentation and Process Safety and Hazards. Core modules develop key chemical engineering skills for students who are new to the subject and further enhance the understanding of chemical engineering graduates. Dissertation CPE\_DISS stretches from S1, S2 and over the summer

Part time (PT) students, will follow a similar programme over 2 years.

### MSc Advanced Chemical Engineering 5584 (Full Time)

	Semester 1		Semester 2	
<b>Year 1</b>	Multiphase Fluid Flow CEE_7_MFF	20	Process Modelling and Simulation CEE_7_PMS	20
	Safety, Health and Environment CEE_7_SHE	20	Advanced Reaction Engineering CEE_7_ARE	20
	Process Management (Optional) CEE_7_PRM	20	Process Safety and Hazards (Optional) CEE_7_PSH	20
	Emerging Energy and Sustainability CEE_7_EES (Optional)	20	Process Control and Instrumentation CEE_7_PCI (Optional)	20
	Advanced Materials Engineering CEE_7_AME (Optional)	20	Dissertation (S1/S2 +summer) CEE_7_DIS	60

### MSc Advanced Chemical Engineering 5727 (Part Time)

	Semester 1		Semester 2	
<b>Year 1</b>	Multiphase Fluid Flow CEE_7_MFL	20	Process Modelling and Simulation CEE_7_PMS	20
	Process Management (Optional) CEE_7_PRM or Emerging Energy and Sustainability CEE_7_EES (Optional) or Advanced Materials Engineering CEE_7_AME (Optional)	20	Process Safety and Hazards (Optional) CEE_7_PSH or Process Control and Instrumentation CEE_7_PCI (Optional)	20

CEE_7_PSH	Process Safety and Hazards (Optional)	7	S2	20	Exam 60% CW 40%
CEE_7_DIS	Dissertation	7	YEAR	60	CW: 100% 75% Thesis 25% Viva

### I. Timetable information

- Students can expect to receive a confirmed timetable for study commitments; during welcome week of Semester 1
- Enrolled students will be announced via Moodle and in class if Timetable changes are planned

### J. Costs and financial support

#### Course related costs

- Access to labs and consumables for projects will be applied from School of Engineering
- Field trips may be self-funded
- The tuition fee do not cover any literature (downloads or books) nor stationaries

#### Tuition fees/financial support/accommodation and living costs

- Information on tuition fees/financial support can be found by clicking on the following link - <http://www.lsbu.ac.uk/courses/undergraduate/fees-and-funding> or
- <http://www.lsbu.ac.uk/courses/postgraduate/fees-and-funding>
- Information on living costs and accommodation can be found by clicking the following link- <https://my.lsbu.ac.uk/my/portal/Student-Life-Centre/International-Students/Starting-at-LSBU/#expenses>

### List of Appendices

- Appendix A: Curriculum Map
- Appendix B: Personal Development Planning
- Appendix C: Terminology

## Appendix A

This map provides an aid to help course teams identify where course outcomes (A1-A4, B1-B8, C1-C6 and D1- D7) are being developed, taught and assessed within the course. It also provides a checklist for quality assurance purposes and may be used in validation, accreditation and external examining processes. The table will help students to monitor their own learning and development outcomes for their Personal Developing Plan (PDP) as the course progresses. Approach to PDP is found in Appendix B

## Appendix B: Personal Development Planning

Personal Development Planning (PDP) is a structured process by which an individual reflects upon their own learning, performance and/or achievement and identifies ways in which they might improve themselves academically and more broadly. The MSc course team will indicate where/how in the course/across the modules this is supported.

Approach to PDP	Level M
1. Supporting the development and recognition of skills through scheduled one-to-one meeting	Module coordinator and course director interaction
2. Supporting the development and recognition of skills in academic modules/units.	Across modules, presentations and CW feedback
3. Supporting the development and recognition of skills through purpose designed modules/units.	Dissertations, simulation projects, presentations, and report writing
4. Supporting the development and recognition of skills through research projects and dissertations work.	Dissertation
5. Supporting the development and recognition of career management skills.	Dissertation
6. Supporting the development and recognition of career management skills through taught materials and invited guest lecturers	Dissertation, Process Management, Advanced Materials Engineering, Process Modelling and Simulation
7. Supporting the development of skills by recognising that they can be developed through extra curricula activities.	IChemE seminars/events attendance. Visits at other universities
8. Supporting the development of the skills and attitudes as a basis for continuing professional development.	Dissertation, Process Management, IChemE seminars/events attendance
9. Other approaches to personal development planning.	Dissertation
10. The means by which self-reflection, evaluation and planned development is supported e.g. electronic or paper-based learning log or diary.	Dissertation

## Appendix C:

### Terminology

<b>awarding body</b>	a UK higher education provider (typically a university) with the power to award higher education qualifications such as degrees
<b>bursary</b>	a financial award made to students to support their studies; sometimes used interchangeably with 'scholarship'
<b>compulsory module</b>	a module that students are required to take. (opposite to Optional)
<b>contact hours</b>	the time allocated to direct contact between a student and a member of staff through, for example, timetabled lectures, seminars and tutorials
<b>coursework</b>	student work that contributes towards the final result but is not assessed by written examination
<b>current students</b>	students enrolled on a course who have not yet completed their studies or been awarded their qualification
<b>delivery organisation</b>	an organisation that delivers learning opportunities on behalf of a degree-awarding body
<b>extracurricular</b>	activities undertaken by students outside their studies
<b>feedback (on assessment)</b>	advice to students following their completion of a piece of assessed or examined work
<b>formative assessment</b>	a type of assessment designed to help students learn more effectively, to progress in their studies and to prepare for summative assessment; formative assessment does not contribute to the final mark, grade or class of degree awarded to students

<b>higher education provider</b>	organisations that deliver higher education
<b>independent learning</b>	learning that occurs outside the classroom that might include preparation for scheduled sessions, follow-up work, wider reading or practice, completion of assessment tasks, or revision
<b>intensity of study</b>	the time taken to complete a part-time course compared to the equivalent full-time version: for example, half-time study would equate to 0.5 intensity of study
<b>lecture</b>	a presentation or talk on a particular topic; in general lectures involve larger groups of students than seminars and tutorials
<b>learning zone</b>	a flexible student space that supports independent and social learning
<b>material information</b>	information students need to make an informed decision, such as about what and where to study
<b>mode of study</b>	different ways of studying, such as full-time, part-time, e-learning or work-based learning
<b>modular course</b>	a course delivered using modules
<b>module</b>	a self-contained, formally structured unit of study, with a coherent and explicit set of learning outcomes and assessment criteria; some providers use the word 'course' or 'course unit' to refer to individual modules
<b>optional module</b>	a module or course unit that students choose to take (opposite to Compulsory)
<b>professional body</b>	an organisation that oversees the activities of a particular profession and represents the interests of its members
<b>prospective student</b>	those applying or considering applying for any programme, at any level and employing any mode of study, with a higher education provider

<b>regulated course</b>	a course that is regulated by a regulatory body
<b>regulatory body</b>	an organisation recognised by government as being responsible for the regulation or approval of a particular range of issues and activities
<b>scholarship</b>	a type of bursary that recognises academic achievement and potential, and which is sometimes used interchangeably with 'bursary'
<b>semester</b>	either of the parts of an academic year that is divided into two for purposes of teaching and assessment (in contrast to division into terms)
<b>seminar</b>	seminars generally involve smaller numbers than lectures and enable students to engage in discussion of a particular topic and/or to explore it in more detail than might be covered in a lecture
<b>summative assessment</b>	formal assessment of students' work, contributing to the final result
<b>term</b>	any of the parts of an academic year that is divided into three or more for purposes of teaching and assessment (in contrast to division into semesters)
<b>total study time</b>	the total time required to study a module, unit or course, including all class contact, independent learning, revision and assessment
<b>tutorial</b>	one-to-one or small group supervision, feedback or detailed discussion on a particular topic or project
<b>workload</b>	see 'total study time'
<b>written examination</b>	a question or set of questions relating to a particular area of study to which candidates write answers usually (but not always) under timed conditions
