Full time	1 year	September	September																				
Full time with placement/ sandwich year																							
Part time	2 years	September	September																				
Part time with Placement/ sandwich year																							
Is this course generally suitable for students on a visa?	Yes. Students are advised that the structure/nature of the course is suitable for those on a visa but other factors will be taken into account before a CAS number is allocated.																						
Approval dates:	Course(s) validated	July 2019																					
	Course Review date	July 2024																					
	Course specification last updated and signed off	September 2022																					

Professional, Statutory & Regulatory Body accreditation	MSc not yet accredited. Accreditation interview with Institute of Chemical Engineers (IChemE) planned before 2023	
Reference points:	Internal	-Corporate Strategy 2020-2025 -Academic Quality and Enhancement Manual -School Strategy -LSBU Academic Regulations
	External	-QAA Quality Code for Higher Education (2018) -Framework for Higher Education Qualifications (QAA, 2018) -Subject Benchmark Statements: Engineering (2018) -The Accreditation of Higher Education Programmes (AHEP-3 2014) -SEEC Level Descriptors (2021) -Competitions and Markets Authority Guidance
B. Course Aims and Features		
Distinctive features of course	MSc Advanced Chemical Engineering offers topics required for a successful career as a chemical engineer, where the student gain solid knowledge in process design and management, chemical reaction and reactor operations, computer simulation, materials engineering and health, safety & environment (HSE). The MSc programme benefits from blending MEng and MSc classroom teaching to enhance the student experience through greater class sizes, more efficient team working skills development and increased learning experiences sharing. The course has been developed in response to relevant industry needs and it reflects the Division of Chemical and Energy's teaching excellence and research strength, where the latter is defining the various MSc Dissertation topics on offer.	
Course Aims	<p>The MSc Advanced Chemical Engineering aim to:</p> <ol style="list-style-type: none"> 1. Produce MSc graduates trained in the advanced level of chemical engineering core material such as including reaction & process engineering and process management in a sustainable manner 2. To produce MSc graduates who are equipped with the relevant understanding of problem solving, analytical skills, and project management required to operate effectively as a future project leader in the field chemical engineering. 3. To produce MSc graduates capable of contributing to the profession of chemical engineering in the context of modern and sustainable industrial development. 4. To enable students to develop an understanding of relevant professional disciplines associated with chemical engineering industry, and to operate well in multidisciplinary teams. 5. Develop students' engineering knowledge and skills of mathematic problem solving, applied science & technology understanding, analytical methods and process health, safety & environment legalisation, and regulations 6. Develop students' intellectual and reasoning powers, their ability to perceive the broader perspective of the task, and their enhanced problem-solving skills through the integration of a broad range of subject material on offer. 7. To teach students clear communication skills, how to discuss rationally and to draw justified conclusions based on range of analytical and critical approaches in problem solving. 	

	<p>8. To encourage personal quality development and professional competences required for a successful career.</p> <p>9. To develop the transferable skills expected of an MSc graduate who will work in industrial multi-disciplinary teams that may include technical, commercial and management staff.</p>
<p>Course Learning Outcomes</p>	<p>A. <u>Students will have knowledge and understanding of:</u></p> <p>A1. Mathematics, science & technology and engineering, underlying the practice of chemical engineering.</p> <p>A2. The interactions involved in chemical engineering problem solving and applying analytical and computational tools to deal with these while learning appreciation of their benefits and limitations.</p> <p>A3. The scope of chemical engineering from design to simulation of unit operations and processes. The professional and ethical responsibilities in the global and social context of engineering. A thorough understanding of current practice in chemical engineering and its limitations and some appreciation of likely new developments such as current technological and commercial challenges and developments.</p> <p>A4. The economic, management and statutory requirements involved in the practice of chemical engineering. The business practices and how these may be applied appropriately.</p> <p>B. <u>Students will develop their intellectual skills such that they are able to:</u></p> <p>B1. Use mathematics, science & technology and engineering to support theoretical and practical analysis of complex chemical processes.</p> <p>B2. Employ concepts from the applied and engineering sciences to design and evaluate chemical processes. Use scientific principles in the modelling and analysis of chemical engineering processes.</p> <p>B3. Show awareness of the significance of health, safety & environment (HSE) in design work. Critically analyse commercial risks through understanding the basis of such risks.</p> <p>B4. Use fundamental knowledge of science & technology to investigate new and emerging technologies.</p> <p>B5. Extract data pertinent to an unfamiliar problem, and apply in its solution using computer based tools when appropriate.</p> <p>B6. Integrate engineering principles of a multi-disciplinary nature to propose solution to problems.</p> <p>B7. Apply management and business practices appropriately.</p> <p>B8. Produce engineering solutions, which are consistent with ethical and social responsibilities.</p> <p>C. <u>Students will acquire and develop practical skills such that they are able to:</u></p> <p>C1. Use computers and relevant software, such as dedicate specialist</p>

	<p>software, in quantitative and analytical work, as well as general information technology for communication and data handling.</p> <p>C2. Plan and manage work, both individually and in teams, while communicate effectively using appropriate media.</p> <p>C3. Evaluate designs and systems to identify areas of potential hazard and environmental threat and propose improvements.</p> <p>C4. Use laboratory, engineering and analytical tools to provide data to support theoretical understanding.</p> <p>C5. Analyse and solve engineering problems, often based on limited and imperfect data, by critically apply scientific evidence based methods in the solution of problems.</p> <p>C6. Apply principles of project management.</p> <p><u>D. Students will acquire and develop transferrable skills such that they are able to:</u></p> <p>D1. Demonstrate literacy and numeracy skills by control, sort and present data in forms useful for understanding. Select, interpret, and validate data, while identifying possible errors and inconsistencies.</p> <p>D2. Clearly communicate the findings of experiments, projects and other assignments using written reports, oral and visual presentations.</p> <p>D3. Work effectively in a team, recognising the roles played by different team members.</p> <p>D4. Manage own responsibilities, including time and task management.</p> <p>D5. Undertake self-development and the capacity to learn and progress.</p> <p>D6. Identify and solve problems in familiar and unfamiliar situations.</p> <p>D7. Adapt to change in the working environment.</p>
--	--

C. Teaching and Learning Strategy

A. Teaching and learning strategy for knowledge outcomes

All the course lectures, tutorials and laboratory practical work will deliver knowledge and understanding described in A1. The knowledge and understandings of A2, are strongly delivered in the modules: Advanced Reaction Engineering, Safety Health and Environment and Multiphase Flow. These are further developed and delivered as an important outcome of the Dissertation Project. The students will gain knowledge described in A3 in the modules; Safety, Health and Environment, Process Management or Emerging Energy and Sustainability. The A3 learning outcome is also an important feature in the Dissertation Project.

Much of the understanding described in A4 will be gained in Process Modelling and Simulation and Advanced Reaction Engineering and Process Management or Emerging Energy and Sustainability or Advanced Materials Engineering where various engineering management tools will be taught. In all modules, an understanding of health & safety practice are featured throughout the course, in particular for the practical work undertaken.

The MSc students are encouraged to attend the seminars/event such as those organised by externally by IChemE and research seminars at LSBU. Invited guest lectures from industry will deliver presentations at LSBU on relevant and current topics.

B Teaching and learning strategies for intellectual skills

Most of the curriculum of the MSc course will support the intellectual learning skills outcomes described in B1-B8. The intellectual skills are developed through lectures, individual and group problem-based work, including the Dissertation Project. In private study, students will develop their engineering intellectual skills by report writing, and addressing problems set by the tutor or in past examinations, case studies, and projects.

The learning outcomes described in B5 are developed in computer laboratory sessions embedded in modules and projects (Multiphase Fluid Flow and Process Modelling and Simulation)

C. Teaching and learning outcomes for developed practical skills

Computing skills for engineering and science, C1, is expanded in the course where students will learn the principles and study the application of specialist engineering packages. (Aspen HYSYS, STAR CCM+)

C2 and C3 will be major part of small projects embedded in modules across the programme.

C4 will be acquired in practical laboratory sessions such as in Advanced Materials Engineering Coursework in modules like Process Modelling and Simulation and the Dissertation project will be open-ended, developing C5 and C6.

D. Teaching and learning outcomes for developed transferable skills

The outcomes described in D1 are developed in practical work and design tasks where students for example obtain data from handbooks and computer databases, and use it in calculations, graphical solutions and computer applications.

The transferable skills outcomes described in D2 and D3 are developed by report-writing and team-working exercises and in laboratory and project-oriented modules. D4-D6 developed along the course but in particular in the Dissertation module, which is research based

E. Assessment

A Assessment for knowledge and understanding outcomes

Content, knowledge and understanding of the taught material are assessed either by 100% coursework, or combined coursework and examination (typical 40% CW - 60% exam) Summative coursework will be based on the practical or theoretical content of the module, as either essays, reports, group work, oral presentations, production of posters, and in-class tests.

Examinations normally take the form of a 2 to 3-hour unseen end-of-semester paper pre examined by external exam board.

Formative assessments will include tutorials exercises, computer simulation exercises, discussions in classroom, questions and answer sessions, peer discussions, observations, reflection on learning, presentation rehearsals

B Assessment for intellectual skills outcomes

Intellectual skills are normally assessed through formal examinations and student presentations. Preparation of laboratory and project reports are also considered as assessment of the developed intellectual skills.

C Assessment of practical skills

C1 will be assessed through computing assignments, C2-C6 as parts of coursework assessment, and C4 in the marking of laboratory reports. The outcomes described in C5-C6 are assessed in project based coursework and will be marked for the critical approach to problem-solving.

D Assessment for developed transferable skills

A variety of methods will be used to assess transferable skills. These assessments include computer laboratory exercises and simulations, oral presentations, written reports, and management in the Dissertation.

D1 is assessed in many of the written examination papers, and reports, and further as constructive feedback on the quality of written reports, D2. The effectiveness of teamwork, D3, is assessed as an element in several coursework tasks throughout the course. D4-D6 is heavily assess in the research based Dissertation module.

E. Academic Regulations

The University's Academic Regulations apply for this course.

http://www.lsbu.ac.uk/_data/assets/pdf_file/0008/84347/academic-regulations.pdf

For course specific protocols please refer to the School/Divisional protocol document.

F. Entry Requirements

The MSc Advanced Chemical Engineering offers a specialization route for chemical engineering graduates, or a conversion route for non-chemical engineering graduates. The standard requirement for admission will be a 2.2 or higher first degree in engineering or a physical science from a UK university, or equivalent degree from overseas. It is considered that a pure software engineering background would not give suitable cover, but that all other branches of engineering will be acceptable. Entrants from a science route must, by their degree or otherwise, be sufficiently prepared for the mathematical content of the course. Applicants must also meet the University's standard requirement for English, i.e. IELTS 6.5, TOEFL 580 or equivalent.

G. Course structure(s)**Course overview MSc Advanced Chemical Engineering. FT and PT**

Full time students (FT) are offered options in Process Management, Emerging Energy and Sustainability, Advanced Materials Engineering, Process Control and Instrumentation and Process Safety and Hazards. Core modules develop key chemical engineering skills for students who are new to the subject and further enhance the understanding of chemical engineering graduates. Dissertation CPE_DISS stretches from S1 , S2 and over the summer

Part time (PT) students, will follow a similar programme over 2 years.

MSc Advanced Chemical Engineering 5584 (Full Time)

	Semester 1		Semester 2	
Year 1	Multiphase Fluid Flow CEE_7_MFF	20	Process Modelling and Simulation CEE_7_PMS	20
	Process Safety and Environmental Management CEE_7_PSE (Optional)	20	Advanced Reaction Engineering CEE_7_ARE	20
	Process Management (Optional) CEE_7_PRM	20	Safety, Health and Environment CEE_7_SHE	20
	Emerging Energy and Sustainability CEE_7_EES (Optional)	20	Dissertation (S1 /S2 +summer) CEE_7_DIS	60
	Advanced Materials Engineering CEE_7_AME (Optional)	20		

MSc Advanced Chemical Engineering 5727 (Part Time)

	Semester 1		Semester 2	
Year 1	Multiphase Fluid Flow CEE_7_MFL	20	Process Modelling and Simulation CEE_7_PMS	20
	Emerging Energy and Sustainability CEE_7_EES (Optional) or Advanced Materials Engineering CEE_7_AME (Optional)	20	Safety Health and Environment CEE_7_SHE	20
Year 2	Process Safety and Environmental Management (Optional) CEE_7_PSE or Process Management (Optional) CEE_7_PRM	20	Advanced Reaction Engineering CEE_7_ARE	20
			Dissertation (S1/S2 +summer) CEE_7_DIS	60

H. Course Modules

Course Modules and Assessment Plan

Module Code	Module Title	Level	Semester	Credit value	Assessment
CEE_7_SHE	Process Safety and Environmental Management (Optional)	7	S1	20	Exam 70% CW 30%
CEE_7_MFF	Multi-Phase Fluid Flow	7	S1	20	Exam 60% CW 40%
CEE_7_PRM	Process Management (Optional)	7	S1	20	Exam 60% CW 40%
CEE_7_EES	Emerging Energy and Sustainability (Optional)	7	S1	20	CW 100%
CEE_7_AME	Advanced Materials Engineering (Optional)	7	S1	20	In-Class test 1 25% In-Class test 2 25% CW1 50%
CEE_7_ARE	Advanced Reaction Engineering	7	S2	20	Exam 40% CW 60%
CEE_7_PMS	Process Modelling and Simulation	7	S2	20	Exam 60% CW 40%
CEE_7_PSE	Safety Health and Environment	7	S2	20	Exam 60% CW 40%
CEE_7_DIS	Dissertation	7	YEAR	60	CW: 100% 75% Thesis 25% Viva

I. Timetable information

- Students can expect to receive a confirmed timetable for study commitments; during welcome week of Semester 1
- Enrolled students will be announced via Moodle and in class if Timetable changes are planned

J. Costs and financial support

Course related costs

- Access to labs and consumables for projects will be applied from School of Engineering
- Field trips may be self-funded
- The tuition fee do not cover any literature (downloads or books) nor stationaries

Tuition fees/financial support/accommodation and living costs

- Information on tuition fees/financial support can be found by clicking on the following link - <http://www.lsbu.ac.uk/courses/undergraduate/fees-and-funding> or
- <http://www.lsbu.ac.uk/courses/postgraduate/fees-and-funding>
- Information on living costs and accommodation can be found by clicking the following link- <https://my.lsbu.ac.uk/my/portal/Student-Life-Centre/International-Students/Starting-at-LSBU/#expenses>

List of Appendices

- Appendix A: Curriculum Map
- Appendix B: Personal Development Planning
- Appendix C: Terminology

Appendix A

This map provides an aid to help course teams identify where course outcomes (A1-A4, B1-B8, C1-C6 and D1- D7) are being developed, taught and assessed within the course. It also provides a checklist for quality assurance purposes and may be used in validation, accreditation and external examining processes. The table will help students to monitor their own learning and development outcomes for their Personal Developing Plan (PDP) as the course progresses. Approach to PDP is found in Appendix B

Appendix B: Personal Development Planning

Personal Development Planning (PDP) is a structured process by which an individual reflects upon their own learning, performance and/or achievement and identifies ways in which they might improve themselves academically and more broadly. The MSc course team will indicate where/how in the course/across the modules this is supported.

Approach to PDP	Level M
1. Supporting the development and recognition of skills through scheduled one-to-one meeting	Module coordinator and course director interaction
2. Supporting the development and recognition of skills in academic modules/units.	Across modules, presentations and CW feedback
3. Supporting the development and recognition of skills through purpose designed modules/units.	Dissertations, simulation projects, presentations, and report writing
4. Supporting the development and recognition of skills through research projects and dissertations work.	Dissertation
5. Supporting the development and recognition of career management skills.	Dissertation
6. Supporting the development and recognition of career management skills through taught materials and invited guest lecturers	Dissertation, Process Management, Advanced Materials Engineering, Process Modelling and Simulation
7. Supporting the development of skills by recognising that they can be developed through extra curricula activities.	IChemE seminars/events attendance. Visits at other universities and industrial sites
8. Supporting the development of the skills and attitudes as a basis for continuing professional development.	Dissertation, Process Management, IChemE seminars/events attendance
9. Other approaches to personal development planning.	Dissertation
10. The means by which self-reflection, evaluation and planned development is supported e.g. electronic or paper-based learning log or diary.	Dissertation

Appendix C:

Terminology

awarding body	a UK higher education provider (typically a university) with the power to award higher education qualifications such as degrees
bursary	a financial award made to students to support their studies; sometimes used interchangeably with 'scholarship'
compulsory module	a module that students are required to take. (opposite to Optional)
contact hours	the time allocated to direct contact between a student and a member of staff through, for example, timetabled lectures, seminars and tutorials
coursework	student work that contributes towards the final result but is not assessed by written examination
current students	students enrolled on a course who have not yet completed their studies or been awarded their qualification
delivery organisation	an organisation that delivers learning opportunities on behalf of a degree-awarding body
extracurricular	activities undertaken by students outside their studies
feedback (on assessment)	advice to students following their completion of a piece of assessed or examined work
formative assessment	a type of assessment designed to help students learn more effectively, to progress in their studies and to prepare for summative assessment; formative assessment does not contribute to the final mark, grade or class of degree awarded to students

higher education provider	organisations that deliver higher education
independent learning	learning that occurs outside the classroom that might include preparation for scheduled sessions, follow-up work, wider reading or practice, completion of assessment tasks, or revision
intensity of study	the time taken to complete a part-time course compared to the equivalent full-time version: for example, half-time study would equate to 0.5 intensity of study
lecture	a presentation or talk on a particular topic; in general lectures involve larger groups of students than seminars and tutorials
learning zone	a flexible student space that supports independent and social learning
material information	information students need to make an informed decision, such as about what and where to study
mode of study	different ways of studying, such as full-time, part-time, e-learning or work-based learning
modular course	a course delivered using modules
module	a self-contained, formally structured unit of study, with a coherent and explicit set of learning outcomes and assessment criteria; some providers use the word 'course' or 'course unit' to refer to individual modules
optional module	a module or course unit that students choose to take (opposite to Compulsory)
professional body	an organisation that oversees the activities of a particular profession and represents the interests of its members
prospective student	those applying or considering applying for any programme, at any level and employing any mode of study, with a higher education provider

regulated course	a course that is regulated by a regulatory body
regulatory body	an organisation recognised by government as being responsible for the regulation or approval of a particular range of issues and activities
scholarship	a type of bursary that recognises academic achievement and potential, and which is sometimes used interchangeably with 'bursary'
semester	either of the parts of an academic year that is divided into two for purposes of teaching and assessment (in contrast to division into terms)
seminar	seminars generally involve smaller numbers than lectures and enable students to engage in discussion of a particular topic and/or to explore it in more detail than might be covered in a lecture
summative assessment	formal assessment of students' work, contributing to the final result
term	any of the parts of an academic year that is divided into three or more for purposes of teaching and assessment (in contrast to division into semesters)
total study time	the total time required to study a module, unit or course, including all class contact, independent learning, revision and assessment
tutorial	one-to-one or small group supervision, feedback or detailed discussion on a particular topic or project
workload	see 'total study time'
written examination	a question or set of questions relating to a particular area of study to which candidates write answers usually (but not always) under timed conditions
