

Course Addendum: Changes to 2020/21 Teaching In Response to Covid-19

Whilst we hope to deliver as much activity on-campus as possible, the government's guidance and social distancing measures will inform how much teaching we can deliver face-to-face in the 2020/21 academic year. Working to government guidelines we have adapted the delivery of our courses to a model of blending learning, which consists of a mix of online and on-campus activities. We are equipped to move between blended learning to fully online, or face-to-face, as the Covid-19 situation evolves.

The learning outcomes of your course remain the same but there are changes to its delivery, assessment and structure, as set out in the Changes section of this document. The subsequent pages of this document contain the original teaching and learning schedule of this course, for your reference.

24th July 2020

Course Details

Course Title(s)	All courses in Civil and Building Services Engineering - BEA
Course Code	3994 MSc Structural Engineering (FT) 3995 MSc Structural Engineering (PT) 5287 MSc Civil Engineering (FT) (SEPT) 5288 MSc Civil Engineering (PT) (SEPT) 4341 Institute of Acoustics Diploma (PT) 4342 Institute of Acoustics Certificate of Competence in Environmental Noise Measurements (FT) 5222 MSc Building Services Engineering (FT) (SEPT) 5224 MSc Building Services Engineering (PT) 5226 MSc Environmental and Architectural Acoustics (FT) (SEPT) 5228 MSc Environmental and Architectural Acoustics (PT) (SEPT) 2072 BEng (Hons) Building Services Engineering (FT) 2090 BEng (Hons) Building Services Engineering (PT) 4947 BEng (Hons) Building Services Engineering (Building Services Engineering Site Management Apprenticeship) (PT) 5124 BEng (Hons) Building Services Engineering (TAC Design Apprenticeship) (PT) 5304 BEng (Hons) Building Services Engineering (DIRECT ENTRY) (PT) 5305 BEng (Hons) Building Services Engineering (Top Up) (PT) 5589 BEng (Hons) Building Services Engineering (ExHND) (FT) 191 BEng/BEng (Hons) Civil Engineering (FT) 5383 BEng (Hons) Civil Engineering (PT) 5123 BEng (Hons) Civil Engineering (TAC Design Apprenticeship) (PT) 2314 HNC Civil Engineering (PT) 4953 HNC Civil Engineering (Construction Site Engineering Technician Apprenticeship) (PT) 549 HND Building Services Engineering (PT) 541 HND Building Services Engineering (FT) 4952 HNC Building Services Engineering (Building Services Engineering Technician Apprenticeship) (PT) 5480 HNC Acoustic Engineering Technician (PT) 5480 HNC Acoustic Engineering Technician (PT)

	Current	New
All modules	No changes required	

B. Course Aims, Features and Outcomes	
Distinctive features of course	<p>This course prepares students for a career as a civil or structural engineer. The course embraces recent industry developments, in particular, the inclusion of the ECUK UK Standard for Professional Engineering Competence (UK-SPEC) and gives students the opportunity to achieve the professional status of Chartered Engineer. The curriculum emphasises the development of traditional engineering numerical strengths coupled with an enquiring creative approach as required by employers.</p> <p>Developing the latter approach is sometimes culturally difficult but it is our aim to get students to eventually approach with relish a blank sheet of paper and an ill-defined, uncertain brief to which they can develop a rational solution.</p> <p>The principles of Building Information Modelling, Computer Aided Design and Finite Element Analysis are studied in a thread of modules and applied in group projects. We do seek to educate, rather than to merely train. Because civil engineering is such a broad area, there is a wide range of different specialisms for students to consider after graduating, but our degree gives to our students a solid background and expertise for entering any of them.</p> <p>The full-time mode is timetabled two-day-a-week and the part-time mode of this course is timetabled on one-day-a-week attendance.</p>
Course Aims	<p>The BEng (Honours) Civil Engineering aims to:</p> <ol style="list-style-type: none"> 1. Produce graduates who are committed to a career in civil engineering with a range of employers in a variety of countries. 2. Produce graduates equipped for postgraduate study and to take up responsible professional employment both in the construction industry and become lifelong learners with an appreciation of the value to society of an education in civil engineering. 3. Produce graduates who have a breadth and depth of knowledge and understanding of the key aspects of civil engineering. 4. Allow graduates to acquire and develop analytical and problem-solving skills, and subject-specific skills. To acquire and develop the ability to evaluate evidence, arguments and assumptions, to reach sound judgements and communicate effectively. 5. Develop graduates who approach design problems creatively and who have the technical skills to see their ideas through to realisation. 6. Provide opportunities to those in full-time employment to study towards a degree in civil engineering on a part-time basis. 7. Create an educational environment that may benefit from the practical experience of mature and part-time students. 8. Provide an engineering education, centred within the built environment that recognises the important roles of other professions in the development of the built environment and cultivates interaction and teamwork with these other professionals. 9. Provide graduates with the necessary academic qualification which equips them to enter advanced postgraduate study thus satisfying an approved course of further learning comprising the full educational base for a Chartered Engineer.
Course Outcomes	<p>LSBU defines knowledge and understanding (A1 to A8), intellectual skills (B1 to B10), practical skills (C1 to C7) and transferable skills (D1 to D4).</p>

The course outcomes have been developed with reference to the JBM guidelines and the Engineering Council's Accreditation of Higher Engineering Programmes document, Third Edition (2014). The number and letter in brackets e.g. (SM2i) refer to the Learning Outcomes described in Engineering Council Documentation Appendix C.

The curriculum map showing the modules in which the material that each of the learning outcomes covers is taught, developed and assessed is in Appendix A.

a) Students will have **knowledge and understanding of:**

A1: Knowledge and understanding of scientific principles and methodology necessary to underpin their education in their engineering discipline, to enable appreciation of its scientific and engineering context, and to support their understanding of relevant historical, current and future developments and technologies. (SM1b)

A2: Knowledge and understanding of mathematical and statistical methods necessary to underpin their education in their engineering discipline and to enable them to apply mathematical and statistical methods, tools and notations proficiently in the analysis and solution of engineering problems. (SM2b)

Ability to apply and integrate knowledge and understanding of other engineering disciplines to support the study of their own engineering discipline. (SM3b)

A3: Understanding the need for a high level of professional and ethical conduct in engineering and knowledge of professional codes of conduct. (EL1b)

A4: Knowledge and understanding of the commercial, economic and social context of engineering processes. (EL2b)

A5: Knowledge of management techniques that may be used to achieve engineering objectives. (EL3b)

A6: Knowledge and understanding of management techniques, including project management, that may be used to achieve engineering objectives. (EL4b)

A7: Awareness of relevant legal requirements governing engineering activities, including personnel, health & safety, contracts, intellectual property rights, product safety and liability issues. (EL5b)

A8: Knowledge and understanding of risk issues, including health & safety, environmental and commercial risk, and risk assessment and risk management techniques. (EL6b)

b) Students will develop their **intellectual skills such that they are able to:**

B1: Understanding of engineering principles and the ability to apply them to analyse key engineering processes. (EA1b)

B2: Ability to identify, classify and describe the performance of systems and components through the use of analytical methods and modelling techniques. (EA2b)

B3 Ability to apply quantitative and computational methods in order to solve engineering problems and to implement appropriate action. (EA3b)

B4: Understanding of, and the ability to apply, an integrated or

- systems approach to solving engineering problems. (EA4b)
- B5: Understand and evaluate the business, customer and user needs, including considerations such as the wider engineering context, public perception and aesthetics. (D1b)
- B6: Investigate and define the problem, identifying any constraints including environmental and sustainability limitations; ethical, health, safety, security and risk issues; intellectual property; codes of practice and standards. (D2b)

	<p>B7: Work with information that may be incomplete or uncertain and quantify the effect of this on the design. (D3b)</p> <p>B8: Apply advanced problem-solving skills, technical knowledge and understanding, to establish rigorous and creative solutions that are fit for purpose for all aspects of the problem including production, operation, maintenance and disposal. (D4b/G1b)</p> <p>B9: Plan and manage the design process, including cost drivers, and evaluate outcomes. (D5b)</p> <p>B10: Communicate their work to technical and non-technical audiences. (D6b)</p> <p>c) Students will acquire and develop practical skills such that they are able to:</p> <p>C1: Understanding of contexts in which engineering knowledge can be applied (for example operations and management, application and development of technology, etc.). (P1b)</p> <p>C2: Knowledge of characteristics of materials, equipment, processes or products. (P2b)</p> <p>C3: Ability to apply relevant practical and laboratory skills. (P3b)</p> <p>C4: Understanding the use of technical literature and other information sources. (P4b)</p> <p>C5: Knowledge of relevant legal and contractual issues. Understanding of appropriate codes of practice and industry standards (P5b and P6b)</p> <p>C6: Awareness of quality issues and their application to continuous improvement. (P7b)</p> <p>C7: Ability to work with technical uncertainty. Understanding of, and the ability to work in, different roles within an engineering team. (P8b and P9b).</p> <p>d) Students will acquire and develop transferable skills such that they are able to:</p> <p>D1: Apply their skills in problem-solving, communication, information retrieval, working with others and the effective use of general IT facilities. (G1d)</p> <p>D2: Plan self-learning and improve performance, as the foundation for lifelong learning/CPD. (G2d)</p>
	<p>D3: Plan and carry out a personal programme of work, adjusting where appropriate. (G3d)</p> <p>D4: Exercise initiative and personal responsibility, which may be as a team member or leader. (G4d)</p>

<h2>C. Teaching Strategy</h2>

A Knowledge and understanding

Scientific principles underpinning *Engineering & Fluid Mechanics, Hydraulics, Materials, Engineering Structures* and *Soil Mechanics* (outcome SM1b) are taught at all levels. Engineering Surveying is taught at level 4 only. Teaching methods include lectures, tutorial, laboratory experiments, computing and online sources for self-study.

Understanding of scientific principles is developed in *Design Modules* and *Projects* work, both individual and group. *Mathematics A* (outcome SM2b) is taught at level 4 and more *Advanced Mathematics* at level 5 using lectures, tutorials, computing sessions and online formative assessments. *Mathematics, Statistics and Probabilities* understanding, and application are developed in several levels 5 and 6 modules.

Students are taught about other engineering disciplines (outcome SM3b) in *Construction Practice C & Structures and Construction Technology A* at level 4 and in *Structures and Construction Management A & BIM and Design* at level 5 as well as being taught in *Highway Engineering A* and developed through *Projects* at level 6.

Students are taught professional and ethical conduct (outcome EL1b) in *Construction Practice C* module at level 4 and in *Projects* at level 6.

The commercial, economic and social context of engineering (outcome EL2b) is introduced in *Construction Technology* and *Management* related modules at all levels as well as *Projects*.

Project management (outcome EL3b) is also introduced in *Construction Technology* and *Management* related modules at all levels as well as *Projects*.

Sustainability principles and the ability to apply quantitative techniques (outcome EL4b) are taught at level 4 in *Construction Practice C & Materials and Geology A* modules and further taught and developed at levels 5 in *Hydraulics & Soil Mechanics* and in level 6 in *Geotechnical Engineering, Environmental Engineering* and *Highway Engineering A* modules.

Legal aspects of civil engineering, including contracts and liabilities (outcome EL5b) and risk assessment and management including health and safety (outcome EL6b) principles are covered in *Structures and Construction Management A, Materials and Geology A* module and further developed in *Highway Engineering A*. Case studies and examples from practice are combined with the presentation of theoretical principles.

Teaching is through lectures, tutorials and practical sessions. The application of health and safety is through risk assessment, which students are constantly introduced to in laboratory and field works. (Outcomes EL1b-EL6b) are developed in research and group design *Project* work at level 6. Throughout the course students have module guides relevant to each topic of study, giving additional reading material which students are encouraged to use for private study to consolidate the formal learning process, and both broaden and deepen their knowledge and understanding in the subject area. All students are encouraged to become student members of the professional institutions, use their libraries and resources, and attend meetings.

B Intellectual skills

Students are taught to interpret and assess their results and to understand engineering principles and to apply them to analyse key engineering processes (outcome EA1b) in *Fluid Mechanics A* and *Structures and Construction Technology A* at level 4 and in *Hydraulics, Structures and Construction Management A & Soil Mechanics* modules of level 5.

The student's skills are further developed in most level 6 modules.

The ability to identify, classify and describe the performance of systems and components through the use of analytical methods and modelling techniques (outcome EA2b) is taught in *Materials and Geology A* at level 4 and is developed later in most modules of level 5 while being taught in *BIM and Design* at the same level 5 as well as being taught in *Structures & design A* and developed through *Geotechnical* and *Environmental Engineering* at level 6.

Students are taught how to apply quantitative and computational methods in order to solve engineering problems and to implement appropriate action (outcome EA3b) in *Engineering Surveying* and *Mathematics A* at level 4 and in later *Design* and *Mathematics* modules of level 5.

At levels 5, in *8/M and Design* module, students are taught to understand and apply, an integrated or systems approach to solving engineering problems (outcome EA4b).

Students are taught the necessity to understand end users' needs (outcome D1b) in the *Construction Practice C* module and develop this through the group design projects in the same module. This skill is taught and developed further in *BIM and Design* at level 5.

The skill of defining the problem and its various constraints (outcome D2b) is taught in *Construction Practice C* and *Materials and Geology A* at level 4 and is developed later in *most modules* of level 5 while being taught and developed in *most modules* of level 6.

The students learn how to deal with uncertainty and incomplete information (outcome D3b) in *Design of Elements A* at level 5. This is developed in *most design modules* of levels 5 and 6.

In *Mathematics A*, *Advanced Mathematics* and *design modules*, they are also taught problem-solving skills (outcome D4b) which they develop in solving problems with the complexity of issues in *Group Design Project*. In *design projects* at each level, students learn how to manage the design process (outcome D5b) and also to communicate their work (outcome C6). The communication skills are taught in *Construction Practice C* (writing, AutoCAD) and at level 5 in *BIM and Design* module.

(Outcomes D1b-D6b) are developed in research and group design *Project* work at level 6.

c Practical Skills

Students appreciate the context of engineering (outcome P1b) in *Structures and Construction Technology A* at level

4. This is then taught and developed in *Design of Elements A* and most level 6 modules.

Understanding of materials, equipment etc. (outcome P2b) and the laboratory practice (outcome P3b) are largely taught and developed at levels 4 and 5, in technical and computing laboratories and in lectures and tutorials.

In their study, students are taught to use technical literature related to a specific discipline (outcome P4b). This knowledge is developed in project work at level 6.

Relevant legal and contractual issues (outcome P5b) are taught in *Structures and Construction Management A* at level 5 and developed further in *BIM and Design* at the same level as well as in *Projects* at level 6.

Modules covering *engineering design* cover the use of codes of practice (Eurocode) (outcome P6b). Quality issues (outcome P7b) are introduced in *Materials and Geology A* at level 4, in relation to the laboratory experiments. The quality awareness is developed in *Hydraulics* and *Soil Mechanics* of level 5, while at level 6, it is developed in *Structures and Design A*,

Geotechnical and Environmental Engineering and *Group Design Project*.

Students' ability to work with technical uncertainty (outcome P8b) is developed in *all modules* of level 6 while it is also taught in research methodologies lectures for the individual *project* at the same level. Group working skills (outcome P9b) are taught in *Construction Practice C* and developed in *Highway Engineering A*

and *Group Design Project*.

D Transferable Skills

In most level 4 modules, students acquire their (outcome G1b) related skills of communication in *Construction Practice C*, problem-solving in *Mathematics A*, *Fluid Mechanics A*, *Structures and Construction Technology A*, computing in *Construction Practice C*, *Fluid Mechanics A*, information retrieval in *Materials and Geology A* and *Engineering Surveying* and working with

D. Assessments

A Knowledge and understanding

The understanding of the knowledge base of scientific principles (SM1b) is assessed through *unseen written examinations* and *in-class tests* at levels 4, 5 and 6, in the disciplines of Fluid Mechanics, Materials, Structures, Soil Mechanics, Hydraulics, Geotechnical and Environmental Engineering. *Coursework* is also used, comprising *laboratory, computing and design reports*. Mathematics (SM2b) is assessed at levels 4 and 5 through *phase tests* and *unseen written examinations*. Students are assessed in their understanding of other engineering disciplines (outcome SM3b) in *Construction Practice C* through *reports* and *individual and group projects* & Structures and Construction Technology through *design exercises* at level 4 and in Structures and Construction Management A through *reports and essays* & BIM and Design through *group projects* at level 5 as well as being assessed in Highway Engineering A through *design projects* at level 6. Professional and ethical conduct (EL1b) is assessed through *projects* at level 6. Financial and social context (EL2b) is assessed in Structures and Construction Technology through *design exercises* and *coursework* at level 4 and through *projects* at level 6. Legal aspects (EL5b) are assessed in Structures and Construction Management A at level 5, through *coursework*.

Knowledge of management (EL3b) and health and safety principles (EL6b) is assessed in Structures and Construction Management A module at level 5, again through *written assignments*. The understanding of sustainability (EL4b) is assessed *in laboratory reports* in *Materials and Geology A* and *group project work* in Construction Practice module at level 4 as well as in *Hydraulics* and *Soil Mechanics* modules through *laboratory reports* and *unseen written examinations* at level 5. At level 6, the understanding of approaches for analysing sustainability is assessed through *unseen written examinations* in Environmental Engineering and Geotechnical Engineering, and it makes a part of the *group and individual project* submission, all at level 6.

B Intellectual Skills

Assessment:

The interpretation of results (EA1b) is assessed in *laboratory reports* where results from two or more different approaches are compared and recommendation given. This occurs in Structures, Fluid Mechanics A, Hydraulics, Materials and Geology A, Highways Engineering A and Soil Mechanics modules and also in the *project work*. The ability to use analytical methods and modelling techniques (EA2b) is assessed through *tests* and *reports* in *Materials and Geology A* at level 4 and in later analysis and design modules as *design exercises* and *projects*. How

to apply quantitative and computational methods (EA3b) is assessed in Mathematics A in the form of *tests* and *unseen written examinations* and in Engineering Surveying A *coursework* at level 4 and in *coursework* and *tests* in later design modules, where based on the results the students recommend an action. *Group Design Project* assesses a variety of skills and knowledge combined to solve a complex engineering problem in an integrated and systematic approach (EA4b).

Identifying end users' needs (D1b) is assessed in *project work* in the *Construction Practice C* module, in BIM and Design (aesthetics) and in *group design project*. The skill of defining the problem (D2b) is assessed in most modules, starting from level 4. Statistics and probability are part of the *tests* and *exams* in Mathematics A and advanced Mathematics, but general dealing with uncertainty (D3b) is assessed in *design coursework* and *tests* at levels 5 and 6. Problem-solving skills (D4b) and their application to multi-disciplinary problems are assessed through *group design project*. The management of the design process (D5b) is assessed in *coursework* in level 4, 5 and 6 management modules. The communication skills (D6b) are assessed in *Construction Practice C (academic report writing, AutoCAD tests)*, at level 5 in BIM and Design module, as a *group design project* as well as *group design projects* at level 6.

c Practical Skills

Assessment:

Structures and Construction Technology A *coursework* combines real buildings and beam structural analysis. Further context awareness (P1b) is assessed in the module Design of Elements A *coursework* and *unseen written examinations*, and in the *coursework* of most level 6 modules. Understanding of materials, equipment etc. (P2b) and the laboratory practice (P3b) are assessed at levels 4 and 5, in *technical* and *computing laboratory reports*. The use of technical literature related to a specific discipline (P4b) is assessed in *coursework* and *design exercises* in BIM and Design, Structures and Design A and other modules. The P1b-P5b outcomes are also assessed in final year *Research Project*. Relevant legal and contractual issues (P5b) are assessed through *reports* and *coursework* in Structures and Construction

Management A. The use of codes of practice (Eurocode) (P6b) forms a part of *in-class tests* in design modules at levels 5 and 6. The appreciation of quality issues (P7b) such as the quality of results is included in *lab reports* in *Materials and Geology A* at level 4 and Soil Mechanics at level 5. The quality awareness is assessed also in Hydraulics and Structures and Design A as in *coursework* and *reports* and in *Group Design Project* at level 6. Students' ability to work with technical uncertainty (P5b) is assessed at level 6 in Geotechnical and Environmental Engineering, Highway Engineering A as *coursework* and *group design exercises* as well as the *Individual project*. Group working skills (P9b) are assessed in *coursework*, *group design exercises* and *field work* for Highway Engineering A and *Group Design Project*.

D Transferable Skills

Assessment:

(G1b) is tested in a variety of ways. Communication in *Construction Practice C* is assessed in a *project report*, problem-solving in Mathematics A, Fluid Mechanics A, Structures and Construction Technology A in *tests* and *exams*, computing of *Construction Practice C* and Fluid Mechanics A is assessing it through *in-class tests*, information retrieval in *Materials and Geology A* as well as Surveying, in *laboratory reports* and working with others in *Construction Practice C* in *group project reports*. These skills are part of the assessment in most level 5 and 6 modules. Self-learning and personal development (G2b) is assessed in *Construction Practice C* through *coursework* and in the final year *projects*. The ability to carry out a personal programme of work (G3b) is a part of the

Research project assessment. Exercising personal responsibility (G4b) is assessed in *Construction Practice C*, Highway Engineering A in *group design exercises*, and also assessed in *Group Design Projects*.

E Academic Regulations

The University's Academic Regulations apply for this course. Any course specific protocols will be

identified here.

http://www.lsbu.ac.uk/data/assets/pdf_file/0008/84347/academic-regulations.pdf

The lowest mark in an Assessment that can be compensated is 30%.

F. Entry Requirements

Pre-requisites for this course

In order to be considered for entry to the course applicants will be required to have the following qualifications:

Year 1 entry (full-time and sandwich only)

Applicants for admission to the course should normally possess one of the following qualifications:

GCSE passes in six subjects (grade C or above), including English Language and Physics. The University will accept a pass in the Key Skills qualification at Level 2 in place of GCSE English Language. Additionally, applicants must possess one of the following:

- A-Level BBC **or**;
- BTEC National Diploma DDM **or**;
- Access to Engineering qualifications with 15 Distinctions and 30 Merits including Maths and Physical Science credit, **or**;
- Equivalent level 3 qualifications worth 128 UCAS points
- Level 3 qualifications must include Maths and Physics
- Applicants must hold 5 GCSEs A-C including Maths and English or equivalent (reformed GCSEs grade 4 or above).
- We welcome qualifications from around the world. English language qualifications for international students: IELTS score of 6.0 **or** Cambridge Proficiency or Advanced Grade C.

Year 2 entry (full-time, sandwich and part-time)

- BTEC HNC/D - six Merit passes at Level H. Must include passes in Mathematics and should preferably include Structural Analysis, Hydraulics, Surveying and Soil Mechanics; or
- A qualification deemed to be the equivalent of the above.

Credit for prior learning (APL)

Applicants may be able to use their learning from work or other life experiences to gain academic credit towards their course of study. This is rare. Applicants need to demonstrate that their learning is equivalent to formal learning on the course and produce satisfactory evidence. If an applicant has gained a qualification from a professional body or another institution this may be credited towards the university qualification via our transfer credit scheme. This is not rare.

G. Course Structure

Full-time Course Overview

The Course is delivered on a semester pattern; each semester is 15 weeks in duration.
Students study six modules at each of Level 4, Level 5, and Level 6.

Construction Practice C (L4)	Fluid Mechanics A (L4)
Materials and Geology A (L4)	Structures and Construction Technology A (L4)
Mathematics A (L4)	Engineering Surveying (L4)
Year 2	
BIM and Design (L5)	Hydraulics (L5)
Design of Elements A (L5)	Advanced Mathematics (L5)
Structures and Con Man A (L5)	Soil Mechanics (L5)
Year 3	
Structures and Design A (L6)	Group Design Project (L6)
Geotechnical Engineering (L6)	Individual Research Project A (L6)
Highway Engineering A (L6)	Environmental Engineering and PD (L6)

All the modules are core modules

J Costs and Financial Support

Information on tuition fees/financial support can be found by clicking on the following link –

<http://www.lsbu.ac.uk/courses/undergraduate/fees-and-funding>

Information on living costs and accommodation can be found by clicking the following link-

<https://my.lsbu.ac.uk/my/portal/Student-Life-Centre/International-Students/Starting-at-LSBU/#expenses> For

Materials and Geology Module, students will need to purchase safety boots which cost around **£20**. A small cost in the area of up to **£10** can be anticipated (poster, any printed chapter drafts for supervisor and logbook). A USB flash drive will also be submitted but the student can collect it back from the supervisor at the end of the semester Constructionarium in

List of Appendices

Appendix A: Curriculum Map

Appendix B: Personal Development Planning

Appendix C: Learning outcomes (Correlation between JBM codes and LSBU codes)

Appendix D: Educational Framework

Appendix E: Terminology

Appendix A: Curriculum Map

This map provides a design aid to help course teams identify where course outcomes are being taught (T), developed (D), assessed (A) within the course. It also provides a checklist for quality assurance purposes and may be used in validation, accreditation and external examining processes. Making the learning outcomes explicit will also help students to monitor their own learning and development as the course progresses.

Appendix B: Personal Development Planning

A variety of terms are used in higher education to describe a process undertaken by individuals to gather evidence on, record and review their own learning and achievement, and identify ways in which they might improve themselves academically and more broadly. The term Personal Development Planning (PDP) is proposed to describe a structured process undertaken by an individual to reflect upon their own learning, performance and/or achievement and to plan for their personal educational and career development. The purpose of this tool is to help HE teaching staff to explain where PDP is being used within a course or portfolio of modules.

Approach to PDP	Level 4, Level 5 and Level 6
1 Supporting the development and recognition of skills through the personal tutor system.	<p>The personal tutor of a specific group of students (to be defined every year for the new students) is the first person to contact by the students when they have an issue apart from the academic ones.</p> <p>The next person to support the student's issues is the Course Director who is responsible for all the students or the course (full-time and part-time Course). The Course Director works together with the year tutors to solve issues and support the development and recognition of the student effort. This is brought to the attention of all students at induction and regularly during the year.</p> <p>There are open surgeries offered by all staff for four hours a week in each semester.</p>
2 Supporting the development and recognition of skills in academic modules/modules.	<p>All modules are structured so that, in total over the three years of study, the combination of coursework introduces and develops the technical skills at undergraduate level in the fields of experimentation, hands-on computer modelling, structural/traffic/coastal design exercises, critical analysis, analysis methodologies, data interpretation and verification, and research methodologies.</p> <p>Assessed coursework, in stages, provides the feedback for the consolidation and improvement of these academic skills.</p>
3 Supporting the development and recognition of skills through purpose designed modules/modules.	<p>The main technical skills required for an undergraduate civil engineering course are covered in all the taught core modules over the three years of the course. In particular, the application of design and analyses skills runs throughout the course in the subjects of Structures, Hydraulics, Geotechnics and Mathematics.</p>
4 Supporting the development and recognition of skills through research projects and dissertations work.	<p>The Project module covers the literature gathering and review, referencing techniques, technical writing, results presentation, and research methodologies.</p> <p>The LSBU Librarian (Engineering Section) demonstrates the in-house facilities available for off-line and online searches for papers, journals and articles.</p> <p>The Project module is based on an individual work undertaken over a period of nine months.</p> <p>A student meets with the supervisor on a term-time weekly session of about fifteen minutes to discuss and monitor progress.</p>

5 Supporting the development and recognition of career management skills.	An academic staff member, who is the Liaison Officer for the Institution of Civil Engineers and The Institution of Structural Engineers, briefs the students on the benefits of the student membership of both the institutions. The local South East branch of the Institution of Civil Engineers visits the students on site and briefs them about the activities and the benefits of the membership of the local activities, and routes to Chartered Engineering.
---	--

	Students are encouraged to use the LSBU Careers Office for CV preparation, interview skills and job vacancies.
6 Supporting the development and recognition of career management skills through work placements or work experience.	Students are encouraged to take a sandwich year placement after Year 2 of study.
7 Supporting the development of skills by recognising that they can be developed through extracurricular activities.	Students are directed to some of the wealth of resources available in London, such as exhibitions, museums, fairs, lectures and conferences.
8 Supporting the development of the skills and attitudes as a basis for continuing professional development.	Notices of lectures and presentations at the Institution of Civil Engineers and The Institution of Structural Engineers are brought to the students' attention.
9 Other approaches to personal development planning.	Any lecturer can guide the student about his or her personal development planning.
10 The means by which self-reflection, evaluation and planned development are supported e.g. electronic or paper-based learning log or diary.	Weekly meetings for the Project between the student and the supervisor. Written and/or verbal feedback on assessed coursework.

Appendix C: Learning Outcomes

Correlation between JMB and LSBU codes on Learning Outcomes

JMB Guidelines January 2018		Course Outcomes LSBU		
Science and Mathematics (SM)	SM1b	Knowledge and understanding of scientific principles and methodology necessary to underpin their education in their engineering discipline, to enable appreciation of its scientific and engineering context, and to support their understanding of relevant historical, current and future developments and technologies	A1	Knowledge and Understanding
	SM2b	Knowledge and understanding of mathematical and statistical methods necessary to underpin their education in their engineering discipline and to enable them to apply mathematical and statistical methods, tools and notations proficiently in the analysis and solution of engineering problems	A2	
	SM3b	Ability to apply and integrate knowledge and understanding of other engineering disciplines to support the study of their own engineering discipline		
Engineering and Analysis (EA)	EA1b	Understanding of engineering principles and the ability to apply them to analyse key engineering processes	B1	Intellectual Skills
	EA2b	Ability to identify, classify and describe the performance of systems and components through the use of analytical methods and modelling techniques	B2	
	EA3b	Ability to apply quantitative and computational methods in order to solve engineering problems and to implement appropriate action	B3	
	EA4b	Understanding of, and the ability to apply, an integrated or systems approach to solving engineering problems	B4	
Design (D)	D1b	Understand and evaluate the business, customer and user needs, including considerations such as the wider engineering context, public perception and aesthetics	B5	
	D2b	Investigate and define the problem, identifying any constraints including environmental and sustainability limitations; ethical, health, safety, security and risk issues; intellectual property; codes of practice and standards	B6	
	D3b	Work with information that may be incomplete or uncertain and quantify the effect of this on the design	B7	
	D4b	Apply advanced problem-solving skills, technical knowledge and understanding, to establish rigorous and creative solutions that are fit for purpose for all aspects of the problem including production, operation, maintenance and disposal	B8	
	D5b	Plan and manage the design process, including cost drivers, and evaluate outcomes	B9	
	D6b	Communicate their work to technical and non-technical audiences	B10	

JMB Guidelines January 2018		Course Outcomes LSBU		
Economic, legal, social, ethical and environmental context (EL)	EL1b	Understanding the need for a high level of professional and ethical conduct in engineering and a knowledge of professional codes of conduct	A3	Knowledge and Understanding
	EL2b	Knowledge and understanding of the commercial, economic and social context of engineering processes	A4	
	EL3b	Knowledge and understanding of management techniques, including project management, that may be used to achieve engineering objectives	A5	
	EL4b	Understanding the requirement for engineering activities to promote sustainable development and the ability to apply quantitative techniques where appropriate	A6	
	EL5b	Awareness of relevant legal requirements governing engineering activities, including personnel, health & safety, contracts, intellectual property rights, product safety and liability issues	A7	
	EL6b	Knowledge and understanding of risk issues, including health & safety, environmental and commercial risk, and risk assessment and risk management techniques	A8	
Engineering practice (P)	P1b	Understanding of contexts in which engineering knowledge can be applied (for example operations and management, application and development of technology, etc.)	C1	Practical Skills
	P2b	Knowledge of characteristics of particular materials, equipment, processes or products	C2	
	P3b	Ability to apply relevant practical and laboratory skills	C3	
	P4b	Understanding the use of technical literature and other information sources	C4	
	P5b	Knowledge of relevant legal and contractual issues	C5	
	P6b	Understanding of appropriate codes of practice and industry standards	C5	
	P7b	Awareness of quality issues and their application to continuous improvement	C6	
	P8b	Ability to work with technical uncertainty	C7	
	P9b	Understanding of, and the ability to work in, different roles within an engineering team	C7	
Additional general skills (G)	G1b	Apply their skills in problem-solving, communication, information retrieval, working with others and the effective use of general IT facilities	D1	Transferable Skills
	G2b	Plan self-learning and improve performance, as the foundation for lifelong learning/CPD	D2	
	G3b	Plan and carry out a personal programme of work, adjusting where appropriate	D3	
	G4b	Exercise initiative and personal responsibility, which may be as a team member or leader	D4	

Appendix D: Educational Framework

This appendix to the course specification document enables course teams to evidence how their courses meet minimum expectations, at what level where appropriate, as the basis for embedding the Educational Framework in all undergraduate provision at LSBU.

The dimension of the Educational Framework	Minimum expectations and rationale	How this is achieved in the course
Curricula informed by employer and industry need	<p><u>Outcomes focus and professional/employer links</u></p> <p>All LSBU courses will evidence the involvement of external stakeholders in the curriculum design process, as well as plan for the participation of employers and/or alumni through guest lectures or Q&A sessions, employer panels, employer-generated case studies or other input of expertise into the delivery of the course, provide students with access to current workplace examples and role models. Students should have access to employers and/or alumni in at least one module at level 4.</p>	The curriculum design is informed by the JBM and the Industrial Advisory Panel at LSBU. Teaching staff on the course are LSBU staff.
Embedded learning development	<p><u>Support for transition and academic preparedness</u></p> <p>At least two modules at level 4 should include embedded learning development in the curriculum to support student understanding of, and familiarity with, disciplinary ways of thinking and practising (e.g. analytical thinking, academic writing, critical reading, reflection). Where possible, learning development will be normally integrated into content modules rather than as standalone modules. Other level 4 modules should reference and reinforce the learning development to aid in the transfer of learning.</p>	These expectations are achieved in the Construction Practice C module in which academic writing is introduced and, in the Materials and Geology A module where the behaviour of materials is introduced and linked to the performance of structures, which can be seen as an introduction to analytical thinking.

<p>High impact pedagogies</p>	<p><u>Group-based learning experiences</u> The capacity to work effectively in teams enhances learning through working with peers and develops student outcomes, including communication, networking and respect for diversity of perspectives relevant to professionalism and inclusivity. At least one module at level 4 should include an opportunity for group working. Group-based learning can also be linked to assessment at level 4 if appropriate. Consideration should be given to how students are allocated to groups to foster an experience of diverse perspectives and values.</p>	<p>There is a Group Project in Construction Practice C.</p> <p>Due to the nature of the scheme, group-based learning is also encouraged in topics such as Mathematics.</p> <p>All modules at all level concerning labs and projects are positively impacting on the experience</p>
-------------------------------	---	--

<p>Inclusive teaching, learning and assessment</p>	<p><u>Accessible materials, resources and activities</u> All course materials and resources, including course guides, PowerPoint presentations, handouts and Moodle should be provided in an accessible format. For example, font type and size, layout and colour as well as captioning or transcripts for audio-visual materials. Consideration should also be given to accessibility and the availability of alternative formats for reading lists.</p>	<p>Students work in diverse groups in labs and project and field trips. Inclusion is guaranteed with the mix of different cohorts during the lectures</p>
<p>Assessment for learning</p>	<p><u>Assessment and feedback to support attainment, progression and retention</u> Assessment is recognised as a critical point for at-risk students as well as integral to the learning of all students. Formative feedback is essential during the transition to university. All first semester modules at level 4 should include a formative or low-stakes summative assessment (e.g. low weighted in final outcome for the module) to provide an early opportunity for students to check progress and receive prompt and useable feedback that can feed-forward into future learning and assessment. Assessment and feedback communicate high expectations and develops a commitment to excellence.</p>	<p>Short in-class formative tests are used to check the progress of the students.</p>
<p>High impact pedagogies</p>	<p><u>Research and enquiry experiences</u> Opportunities for students to undertake small-scale independent enquiry enable students to understand how knowledge is generated and tested in the discipline as well as prepare them to engage in enquiry as a highly sought after the outcome of university study. In preparation for an undergraduate dissertation at level 6, courses should provide opportunities for students to develop research skills at level 4 and 5 and should engage with open-ended problems with appropriate support. Research opportunities should build student autonomy and are likely to encourage creativity and problem-solving. Dissemination of student research outcomes, for example via posters, presentations and reports with peer review, should also be considered.</p>	<p>At all levels, there are opportunities for the learners to get ready to undertake their individual research project at the end of the degree.</p>
<p>Curricula informed by employer and industry need /</p>	<p><u>Authentic learning and assessment tasks</u> Live briefs, projects or equivalent authentic workplace learning experiences and/or assessments enable students, for example, to engage with external clients, develop their</p>	<p>The group project introduces the students to work on a live brief.</p>

Assessment for learning	<p>understanding through situated and experiential learning in real or simulated workplace contexts and deliver outputs to an agreed specification and deadline.</p> <p>Engagement with live briefs creates the opportunity for the development of student outcomes including excellence, professionalism, integrity and creativity.</p> <p>A live brief is likely to develop research and enquiry skills and can be linked to assessment if appropriate.</p>	
Inclusive teaching, learning and assessment	<p><u>Course content and teaching methods acknowledge the diversity of the student cohort</u></p> <p>An inclusive curriculum incorporates images, examples, case studies and other resources from a broad range of cultural and social views reflecting the diversity of the student cohort in terms of, for example, gender, ethnicity, sexuality, religious belief, socio-economic background etc. This commitment to inclusivity enables students to recognise themselves and their experiences in the curriculum as well as a foster understanding of other viewpoints and identities.</p>	This diversity is guaranteed with a successful mix of full-time, part-time and apprenticeship students where the lecturers encourage the learners to share their knowledge.
Curricula informed by employer and industry need	<p><u>Work-based learning</u></p> <p>Opportunities for learning that is relevant to future employment or undertaken in a workplace setting are fundamental to developing student applied knowledge as well as developing work-relevant student outcomes such as networking, professionalism and integrity. Work-based learning can take the form of work experience, internships or placements as well as, for example, case studies, simulations and role-play in industry-standards settings as relevant to the course. Work-based learning can be linked to assessment if appropriate.</p>	As noted above students on the course are part-time and working in the construction industry where they will have many opportunities to network and undertake work-based learning.
Embedded learning development	<p><u>Writing in the disciplines: Alternative formats</u></p> <p>The development of student awareness, understanding and mastery of the specific thinking and communication practices in the discipline is fundamental to applied subject knowledge. This involves explicitly defining the features of disciplinary thinking and practices, finding opportunities to scaffold student attempts to adopt these ways of thinking and practising and providing opportunities to receive formative feedback on this. A writing in the disciplines approach recognises that writing is not a discrete representation of knowledge but integral to</p>	Student writing skills are taught and assessed at all levels. These skills are needed to produce the lab reports, field trip reports and group project report that form part of the module's assessments.

	<p>the process of knowing and understanding in the discipline. It is expected that assessment utilises formats that are recognisable and applicable to those working in the profession. For example, project report, presentation, poster, lab or field report, journal or professional article, position paper, case report, handbook, exhibition guide.</p>	
High impact pedagogies	<p><u>Multi-disciplinary, interdisciplinary or interprofessional group-based learning experiences</u> Building on the experience of a group working at level 4, at level 5 students should be provided with the opportunity to work and manage more complex tasks in groups that work across traditional disciplinary and professional boundaries and reflecting interprofessional work-place settings. Learning in multi- or interdisciplinary groups creates the opportunity for the development of student outcomes including inclusivity, communication and networking.</p>	Apprentices are introduced to these expectations at all levels and mainly in the Group Projects.
Assessment for learning	<p><u>Variation of assessment</u> An inclusive approach to curriculum recognises diversity and seeks to create a learning environment that enables equal opportunities for learning for all students and does not give those with a particular prior qualification (e.g. A-level or BTEC) an advantage or disadvantage. A holistic assessment strategy should provide opportunities for all students to be able to demonstrate achievement of learning outcomes in different ways throughout the course. This may be by offering alternate assessment tasks at the same assessment point, for example, either a written or oral assessment, or by offering a range of different assessment tasks across the curriculum.</p>	<p>There is a range of assessments on the course including as follows: Examinations and in-class tests. Laboratory Reports. Presentations. Field Trip Quiz. Field Trip Report. Group Project and Group Surveying Project.</p>
Curricula informed by employer and industry need	<p><u>Career management skills</u> Courses should provide support for the development of career management skills that enable the student to be familiar with and understand relevant industries or professions, be able to build on work-related learning opportunities, understand the role of self-appraisal and planning for lifelong learning in career development, develop resilience and manage the career-building process. This should be designed to inform the development of excellence and professionalism.</p>	As noted above the course is informed by the JBM and the Industrial Advisory Panel at LSBU.

<p>Curricula informed by employer and industry need / Assessment for learning / High impact pedagogies</p>	<p><u>Capstone project/dissertation</u> The level 6 project or dissertation is a critical point for the integration and synthesis of knowledge and skills from across the course. It also provides an important transition into employment if the assessment is authentic, industry-facing or client-driven. It is recommended that this is a capstone experience, bringing together all learning across the course and creates the opportunity for the development of student outcomes including professionalism, integrity and creativity.</p>	<p>As per Individual Research Project A</p>
--	---	---

Appendix E: Terminology

awarding body	a UK higher education provider (typically a university) with the power to award higher education qualifications such as degrees
bursary	a financial award made to students to support their studies; sometimes used interchangeably with 'scholarship'
collaborative provision	a formal arrangement between a degree-awarding body and a partner organisation, allowing for the latter to provide higher education on behalf of the former
compulsory module	a module that students are required to take
contact hours	the time allocated to direct contact between a student and a member of staff through, for example, timetabled lectures, seminars and tutorials
coursework	student work that contributes towards the final result but is not assessed by written examination
current students	students enrolled on a course who have not yet completed their studies or been awarded their qualification
delivery organisation	an organisation that delivers learning opportunities on behalf of a degree-awarding body
distance-learning course	a course of study that does not involve face-to-face contact between students and tutors
extracurricular	activities are undertaken by students, outside their studies
feedback (on assessment)	advice to students following their completion of a piece of assessed or examined work
formative assessment	a type of assessment designed to help students learn more effectively, to progress in their studies and to prepare for summative assessment; formative assessment does not contribute to the final mark, grade or class of degree awarded to students

higher education provider	organisations that deliver higher education
independent learning	learning that occurs outside the classroom that might include preparation for scheduled sessions, follow-up work, wider reading or practice, completion of assessment tasks, or revision
intensity of study	the time is taken to complete a part-time course compared to the equivalent full-time version: for example, the half-time study would equate to 0.5 intensity of study
lecture	a presentation or talk on a particular topic; in general lectures involve larger groups of students than seminars and tutorials
learning zone	a flexible student space that supports independent and social learning
material information	information students need to make an informed decision, such as about what and where to study
mode of study	different ways of studying, such as full-time, part-time, e-learning or work-based learning
modular course	a course delivered using modules
module	a self-contained, formally structured unit of study, with a coherent and explicit set of learning outcomes and assessment criteria; some providers use the word 'course' or 'course unit' to refer to individual modules
national teaching fellowship	a national award for individuals who have made an outstanding impact on student learning and the teaching profession
navigability (of websites)	the ease with which users can obtain the information they require from a website
optional module	a module or course unit that students choose to take
performance (examinations)	a type of examination used in performance-based subjects such as drama and music
professional body	an organisation that oversees the activities of a particular profession and represents the interests of its members
prospective student	those applying or considering applying for any programme, at any level and employing any mode of study, with a higher education provider

regulated course	a course that is regulated by a regulatory body
regulatory body	an organisation recognised by the government as being responsible for the regulation or approval of a particular range of issues and activities
scholarship	a type of bursary that recognises academic achievement and potential, and which is sometimes used interchangeably with 'bursary'
semester	either of the parts of an academic year that is divided into two for purposes of teaching and assessment (in contrast to division into terms)
seminar	seminars generally involve smaller numbers than lectures and enable students to engage in discussion of a particular topic and/or to explore it in more detail than might be covered in a lecture
summative assessment	formal assessment of students' work, contributing to the final result
term	any of the parts of an academic year that is divided into three or more for purposes of teaching and assessment (in contrast to division into semesters)
total study time	the total time required to study a module, unit or course, including all class contact, independent learning, revision and assessment
tutorial	one-to-one or small group supervision, feedback or detailed discussion on a particular topic or project
work/study placement	a planned period of experience outside the institution (for example, in a workplace or at another higher education institution) to help students develop particular skills, knowledge or understanding as part of their course
workload	see 'total study time'
written examination	a question or set of questions relating to a particular area of study to which candidates write answers usually (but not always) under timed conditions
