AQE October 2017 Page 2 of 28

are closely linked to the syllabi of professional accountancy bodies such as ACCA, IFA and AAT – but, unlike most of our direct competitors, the School does not currently offer any specialist undergraduate course in Finance. There is demand for such courses not only domestically but internationally as well. As there is currently no specialist undergraduate course in finance at LSBU, the BSc (Hons) Economics with Finance will offer students wishing to specialize in this area the opportunity of doing so.

The curriculum provides a broad and integrated academic foundation taught via a common first year at level 4 with increasing specialisation opportunities in the area of Finance at levels 5 and 6.

The BSc (Hons) Economics with Finance aims to:

- To provide a broadly based education in economics and to equip our students for a variety of future careers, with European and international perspectives. The curriculum provides a broad and integrated academic foundation at level 4, and 5, with specialisation opportunities at level 6.
- 2. To combine the knowledge of economics with a student-centred learning process to develop skills, attitudes and abilities relevant to the student's future employment. In particular it is designed to equip students with the ability to manage change, both in their individual career and at organisational level.
- To recognise the need for personal effectiveness both in terms of knowledge of the subject discipline and the ability of students to form judgements, undertake tasks and make decisions individually and collaboratively.
- 4. To develop a critical understanding of the wider economic and business environment, including its ethical and social responsibilities. The key themes running through the course include the process and management of change, the growing internationalisation of business and the consequent globalisation of the economy, the application of a range of relevant economic skills, which will feed into employability, initiative and creativity.
- 5. To give the graduate student a core foundation in numerate and analytical skills that will equip the student for economics and business related positions in the world of work.
- 6. Gain knowledge and understanding of the theory and applications of financial management including the financial management function, financial environment and markets, raising of financial resources, optimal allocation of those resources between alternative investments, efficient management of working capital and financial risk, and valuation of the enterprise.

Course Learning Outcomes

a) Students will have knowledge and understanding of:

A1: The theories, methodologies and application of the academic disciplines relevant to the study of economics and, to a lesser extent, business.

A2: Organisations, the external environment in which they operate, how they are managed and the future needs of organisations.

A3: In-depth knowledge in one or more of the following specialist areas of economics: microeconomics, macroeconomics, economic history, statistics, and econometrics.

AQE October 2017 Page 3 of 28

A4: Issues relating to economic decision making on the economy and the responses needed to make economic activities sustainable.

A5: Economic issues at UK, European and international levels.

A6: Gain knowledge and understanding of the theory and applications of financial management including the financial management function, financial environment and markets, raising of financial resources, optimal allocation of those resources between alternative investments, efficient management of working capital and financial risk, and valuation of the enterprise

b) Students will develop their intellectual skills such that they are able to:

B1: Define terms and generalise appropriately.

B2: Identify assumptions and implicit values.

B3: Evaluate statements in terms of evidence and data.

B4: Integrate theoretical knowledge to analyse economic problems, policies and decisions.

B5: Apply theoretical expertise to solve economic problems and generate recommendations.

B6: Identify and manage financial risks and develop and implement organisational financial strategy.

c) Students will acquire and develop practical skills such that they are able to:

C1: Apply theory to practice in a series of 'real life' economic data sets through the medium of appropriate econometric software.

C2: Be able to manage large data files, such that they can transform primary data into usable data for analysis.

C3: Be effective in the use of information and communication technology (ICT) for business and economic applications.

C4: Support decision makers in the acquisition and allocation of financial resources and in the assessment of investment opportunities.

d) Students will acquire and develop transferrable skills such that they are able to:

D1: Define problems and be effective at problem-solving and decision-making, using appropriate quantitative and qualitative skills and also be able to create, evaluate and assess options, together with being able to apply ideas and knowledge to a range of situations.

D2: Be effective performers within a team environment including leadership, teambuilding, influencing and project management skills.

D3: Be effective in communication, oral and written, using ICT and a range of media used in business and economics; select appropriate channels, format and content.

D4: Self-manage one's own time, behaviour, motivation, initiative and enterprise.

C. Teaching and Learning Strategy

The acquisition of knowledge and understanding will be delivered through a variety of strategies.

AQE October 2017 Page 4 of 28

In-class

Lectures will deliver key topic areas across the academic Levels. Where possible, guest speakers from business and academia will bring specialisms and real world contextualisation.

Interactive seminars and workshops will support the lectures and have a strong focus on small group activities to encourage the active participation of students throughout the academic year, developing peer learning, the sharing of knowledge and support amongst the diverse student body.

Examples of activities students will engage with during seminars are: question practice and case study analysis to reinforce and contextualise key lecture topics, debate and discussion. At level 4 there is greater emphasis on acquisition of knowledge of process thus question practice and repetition of process are key to learning. At level 5 the application of knowledge to case study and debate and discussion of current issues support and enhance student learning.

An integrated formative and summative assessment and feedback process are a key component to a student's independent acquisition of knowledge and understanding.

Self-managed learning

Self-managed learning activities to supplement and consolidate classroom based activity include: reading texts and relevant journals, application of knowledge to additional problem based exercises, engaging in coursework, group discussion, review of key topics and examination preparation where appropriate. Many of these activities are supported by the virtual learning environment (VLE).

Throughout the suite of Economics courses the School intends to expand its use of technology for learning and assessment at undergraduate level through the common first year initially and then through core modules across this undergraduate suite of courses. Although there is already an expectation the every module will have a set of core materials available to students via the VLE, the School aims to use digital technology to increase academic support for students particularly at level 4; to improve the efficiency of our teaching and assessment processes; and eventually to transform student learning so that the student experience becomes truly 'blended' and extends well beyond the use of the VLE as merely a document repository.

The development of intellectual skills will be delivered via a structured and progressive strategy of support and delivered over the length of the programme.

In-class

Seminars and workshops encourage student development in this area with the application of knowledge to business case studies and real life problems to develop critical evaluation of relevant information, and problem solving skills. In class debate allows the sharing of ideas amongst peers and the evaluation of opinions within a diverse student body to enable students to develop and evaluate arguments.

At level 4 in particular, support is given to basic cognitive skills development and student research practice via the Concepts of Management module.

The theories underpinning the cognitive process and elementary research techniques are delivered through lectures and supported via interactive seminars applying the theory to case study and discussion of issues arising.

As students move through the programme their ability to evaluate and synthesise information, and their problem solving skills are developed through their application to more complex case study problems through which independence of thought and practice are developed.

AQE October 2017 Page 5 of 28

Research skills are introduced via the Concepts of Management module at level 4, but are predominantly developed at levels 5 and 6 via coursework application and in class case study analysis.

Self-managed learning

Self-managed learning activities supplement in-class learning and will include the reading and critique of academic journals and their application to problem based exercises and peer debate. Links to core journals will be available via the VLE and on-line for will be used to encourage debate and discussion of key issues.

Engagement with coursework and the examination preparation are also key strategies to develop these skills.

In-Class

Practical skills development is delivered via lectures and interactive seminars and workshops. Processes and techniques are demonstrated during lectures and are then developed and applied to questions and exercises during seminars to reinforce learning.

The key practical skills are then continually developed throughout each level demonstrating progressive development. As students' progress through the Programme, there is a move away from the ability to perform practical skills to a greater emphasis on application in an SME context.

Self-managed learning

Self-managed learning is carried out mainly through relevant question practice and review and is supported with materials via the VLE.

Engagement with assessment also assists in the development of practical skills.

These are specifically taught and developed through dedicated modules for example the Concepts of Management module at level 4.

Additionally, transferable skills development is embedded within all other modules through an integrated teaching and learning strategy.

In class

Methods are to be interactive and practical by nature, for example, group work based upon case study and in class presentations are used across both levels.

Spread sheet, planning and problem solving techniques are delivered in workshops and taught via application to case study problems and the synthesis of data.

In addition, transferable skills are developed throughout the teaching and learning seminars using small group discussions, student led presentations, exercises and case studies.

Self-managed learning

Reflective practice and work planning are all skills expected to be developed out of class hours. Additionally, engagement with formative and summative assessment, in particular the coursework element, will naturally develop these skills.

D. Assessment

Formative

AQE October 2017 Page 6 of 28

Formative assessment activities provide opportunity for developmental feedback and reflective learning and are a key feature of teaching and learning strategy throughout the course, to ensure students engage in a process of continuous learning.

In-class testing with peer marking and feedback is a key formative assessment method throughout the programme; this testing will be supported by additional on line tests via the VLE which provide students with automatic feedback as to performance.

As students' progress through the course, in class debate and discussion will provide students and staff with an understanding of the knowledge gained and areas of syllabi needing further reinforcement and delivery. This will allow staff to reflect on student performance and feed-forward into future delivery.

The VLE and in-class presentations can provide formative feedback to both staff and students as to the development of key intellectual skills.

Formative assessment via in-class tests, observation, peer review and debate can inform students and staff concerning the progress that has been made in areas of skill development.

Peer and staff review on a variety of in-class activities can provide formative feedback to students on the development of their transferable skills. This will allow staff to reflect on student performance and feed forward into future delivery.

Summative

The summative coursework assignments used to assess knowledge and understanding are diverse and set within a wider business context.

Examples of the range of assessment types are multiple choice tests (at level 4), business reports (at levels 5 and 6) academic research reports (at level 5 - 6), group work (at levels 4 - 6), and individual assignments (at levels 4 - 5).

Examinations are compulsory for all modules that embed professional body exemptions. They incorporate a variety of question types and assess a broad range of the syllabi content. At level 4, intellectual skills are mainly assessed through coursework as examinations tend to assess knowledge and understanding of basic processes.

As students move through the academic levels examinations are also used to assess the application of knowledge to scenarios and assess their evaluation and problem solving techniques. These skills are also assessed via coursework on all core Economics modules.

Elementary research skills are primarily assessed via coursework. As students' progress through the course, assessment methods will reflect the expectation that students will exhibit greater autonomy in their learning, refine their intellectual skills, and approach their work in a more evaluative manner.

Summative assessment will be via closed book examination, individual and group coursework through which practical skills can be demonstrated. IT skills are necessary to produce each piece of coursework.

The summative assessment of transferable skills is delivered through a variety of methods.

Group work based on case study is used to assess team working, leadership, communication and reflective skills.

Written communication is developed through report writing of both academic and business genres.

AQE October 2017 Page 7 of 28

Verbal communication skills are developed through presentations at each level.

Numeracy skills are embedded throughout all core Analytical / Economics modules.

E. Academic Regulations

The University's Academic Regulations apply for this course. Any course specific protocols will be identified here.

F. Entry Requirements

14.1 General

In order to be considered for entry to the course(s) applicants will be required to have the following qualifications:

The normal qualifications required for entry to Level 4 are GCSE passes at Grade C or above in five subjects, including English Language and Mathematics (or equivalent), plus one of the following:

240 UCAS tariff points (subject to annual review)

BTEC National Diploma – MMM/DD (subject to annual review)

Relevant recognised Access Courses with Pass +24 Merits

Any other Level 3 qualification which is of equivalent standard.

14.2 Accreditation of Prior Learning (APL)

All awards for APL will be in line with the University's policy and current academic regulations.

14.3 Transfer credit

Transfer credit allows credit awarded by another HE Institution to contribute to the credit required for a London South Bank award. Credit may also be transferred from a previous experience of learning at LSBU.

Applicants will be considered on a case by case basis. Consideration of any request for transfer credit will only be confirmed against a transcript of credit or award certification and particular attention will be paid to grades achieved and number of attempts at the assessments.

Applicants for whom English is a foreign language should either hold a recognised qualification in English e.g. British Council IELTS (minimum 6.0) or the TOEFL equivalent.

G. Course structure(s)

Course overview

The course is structured around 360 CATS points/credit or eighteen 20 credit modules.

The programme offers two main award names: Economics with Finance and Economics with Finance [placement].

The degrees are offered as a three-year full time course, and can be taken in the full-time mode as a sandwich course with a work placement year between level 5 and level 6. Those students on the full-time degree who do not wish to take the work placement year with progress to final year without placement.

Programme requirement information is provided as a table to show the structure of each semester's core modules. This is followed by an options module listing.

AQE October 2017 Page 8 of 28

At each level all full-time students study for 120 credits over a traditional academic year. The options offered are contingent on sufficient student demand. All options may not be available in any one year and new options may be added.

The table below shows the modules offered in each semester on the full-time mode. The semester of delivery of all the modules may change in the future due to timetabling and resourcing requirements.

I. Timetable information

This course is delivered over three days per week but this may be subject to change if change is needed to enhance your experience.

AQE October 2017 Page 11 of 28

Outside of the standard delivery you are expected to engage in extra curricular activity, work placements and private study.

You can expect to receive a confirmed timetable during Welcome Week and you will be kept informed of any changes.

J. Costs and financial support

Course related costs

All of your course notes and learning materials are provided to you via our VLE, however you will be expected to purchase the core texts for each module and to supply your own stationery.

The university does have IT resources in the library (PCs & laptops) which you can use, however it would be beneficial to you if you had your own lap top device which you can use both in the classroom and for private study.

If you spend time away from the University on a placement or an internship then the cost of travel and suitable business attire is not included within your fee.

Tuition fees/financial support/accommodation and living costs [5]?

Appendix C: Terminology

AQE October 2017 Page 12 of 28

Appendix A: Curriculum Map

This map provides a design aid to help course teams identify where course outcomes are being developed, taught and assessed within the course. It also provides a checklist for quality assurance purposes and may be used in validation, accreditation and external examining processes. Making the learning outcomes explicit will also help students to monitor their own learning and development as the course progresses.

Appendix B: Embedding the Educational Framework for Undergraduate Courses The Educational Framework at London South Bank University is a set of principles for curriculum design and the wider student experience that articulate our commitment to the highest standards of academic knowledge and understanding applied to the challenges of the wider world.

The Educational Framework reflects our status as University of the Year for Graduate Employment awarded by *The Times and The Sunday Times Good University Guide 2018* and builds on our 125 year history as a civic university committed to fostering social mobility through employability and enterprise, enabling our students to translate academic achievement into career success.

There are four key characteristics of LSBU's distinctive approach to the undergraduate curriculum and student experience:

- Develop students' professional and vocational skills through application in industrystandard facilities
- Develop our students' graduate attributes, self-awareness and behaviours aligned to our EPIIC values
- Integrate opportunities for students to develop their confidence, skills and networks into the curriculum
- Foster close relationships with employers, industry, and Professional, Statutory and Regulatory Bodies that underpin our provision (including the opportunity for placements, internships and professional opportunities)

The dimensions of the Educational Framework for curriculum design are:

- informed by employer and industry needs as well as professional, statutory and regulatory body requirements
- **embedded learning development** for all students to scaffold their learning through the curriculum taking into account the specific writing and thinking requirements of the discipline/profession
- high impact pedagogies that enable the development of student professional and vocational learning through application in industry-standard or authentic workplace contexts
- **inclusive teaching, learning and assessment** that enables all students to access and engage the course
- assessment for learning that provides timely and formative feedback

All courses should be designed to support these five dimensions of the Educational Framework. Successful embedding of the Educational Framework requires a systematic approach to course design and delivery that conceptualises the student experience of the curriculum as a whole rather than at modular level and promotes the progressive development of understanding over the entire course. It also builds on a well-established evidence base across the sector for the pedagogic and assessment experiences that contribute to high quality learning.

AQE October 2017 Page **15** of **28**

This appendix to the course specification document enables course teams to evidence how their courses meet minimum expectations, at what level where appropriate, as the basis for embedding the Educational Framework in all undergraduate provision at LSBU.

Dimension of	Minimum expectations and rationale	How this is achieved in the
the Educational Framework		course
Curricula informed by employer and industry need	Outcomes focus and professional/employer links All LSBU courses will evidence the involvement of external stakeholders in the curriculum design process as well as plan for the participation of employers and/or alumni through guest lectures or Q&A sessions, employer panels, employer-generated case studies or other input of expertise into the delivery of the course provide students with access to current workplace examples and role models. Students should have access to employers and/or alumni in at least one module at level 4.	The course is strongly informed by employer and industry needs and the curriculum is adapted according to suggestions by the Royal Economics Society (RES). Modules are closely mapped to the recommendations of curriculum adaptation to improve graduate skills development by the RES. Optional modules such as "Financial Econometrics", "Applied Econometrics", "Multinational Firms and Global Trade", "Behavioural Economics" or "Contemporary Issues in the UK and World Economy" are highly practical, currently relevant and oriented towards the development of employability skills. We teach using an applied character based education model, developing the whole student via the practical application of knowledge and skills to live scenarios wherever possible To support this aim we work as one networked community with our stakeholders to provide opportunity to students through guest lectures, employer panels and live case studies, this thread runs throughout the course and throughout each module.
Embedded learning	Support for transition and academic preparedness	All modules at Level 4 are designed to support student
development		transition into Higher

AQE October 2017 Page 16 of 28

At least two modules at level 4 should include embedded learning development in the curriculum to support student understanding of, and familiarity with, disciplinary ways of thinking and practising (e.g. analytical thinking, academic writing, critical reading, reflection). Where possible, learning development will be normally integrated into content modules rather than as standalone modules. Other level 4 modules should reference and reinforce the learning development to aid in the transfer of learning.

Education and academic preparedness.

The Concepts of Management module has a specific focus on learning support and has the Be coaching programme embedded within it. Financial Accounting Fundamentals and Economics I has a particular focus on analytical thinking. The Concepts of Management

The Concepts of Management and People and Organisations module develops reflection. Academic writing is explored across all modules and The Introduction to Marketing Module has a focus on critical reading.

All modules make cross reference to each other and reinforce learning and development throughout the students' journey.

All the course modules have learning development embedded in the curriculum, and students engage in independent learning, critical thinking and reflection throughout the course. Independent learning and critical thinking are encouraged right from the start of the course and emphasises throughout in the modules "Business Economics", "Business Economics II", "Intermediate Macroeconomics", "Historical and Institutional Economics", "Intermediate Microeconomics", "Introduction to Advanced Macroeconomics" and "Introduction to Advanced Microeconomics", all of which cover economics theories in the context of application to

AQE October 2017 Page 17 of 28

world phenomena. The "Economics Research" module builds on this – to balance the theoretical and conceptual orientation of the other modules, "Economic Research" places greater emphasis on the scholarty reading and research that develops cognitive skills. High impact pedagogies Fine capacity to work effectively in teams enhances learning through working with peers and develops student outcomes, including communication, networking and respect for diversity of perspectives relevant to professionalism and inclusivity. At least one module at level 4 should include an opportunity for group working. Group-based learning can also be linked to assessment at level 4 if appropriate. Consideration should be given to how students are allocated to groups to foster experience of diverse perspectives and values. Inclusive teaching, activities All course materials, resources and activities All course materials and resources, including course guides, PowerPoint presentations, handouts and Moodle should be provided in an accessible format. For example, font type and size, layout and colour as well as captioning or transcripts for audio-visual materials. Consideration should also be given to			historic and contemporary real

	accessibility and the availability of alternative formats for reading lists.	feedback are key formative assessment methods throughout the programme - all supported by back up material provided on the University's VLE.
		Four module at Level 4 have
Assessment	Assessment and feedback to support	lecture capture. All modules have both
for learning	attainment, progression and retention Assessment is recognised as a critical point for at risk students as well as integral to the learning of all students. Formative feedback is essential during transition into university. All first semester modules at level 4 should include a formative or low-stakes summative assessment (e.g. low weighted in final outcome for the module) to provide an early opportunity for students to check	formative and summative feedback at the appropriate level. All modules have formative assessment and feedback throughout delivery. Often feedback is face to face in class feedback from tutors and peers. Students always have the opportunity to use the feedback to feed forward into
	progress and receive prompt and useable feedback that can feed-forward into future learning and assessment. Assessment and feedback communicates high expectations and develops a commitment to excellence .	the final summative assessment.
High impact pedagogies	Research and enquiry experiences Opportunities for students to undertake small-scale independent enquiry enable students to understand how knowledge is generated and tested in the discipline as well as prepare them to engage in enquiry as a highly sought after outcome of university study. In preparation for an undergraduate dissertation at level 6, courses should provide opportunities for students to develop research skills at level 4 and 5 and should engage with open-ended problems with appropriate support. Research opportunities should build student autonomy and are likely to encourage creativity and problemsolving. Dissemination of student research outcomes, for example via posters, presentations and reports with peer review, should also be considered.	Research enquiry is embedded in the teaching and assessment across the programme. Moreover, learning and application of research methods begins right from the start of the course and continues throughout. The aim is to enable students to see the linkage between economic theories and methods and their practical application within a real world policy context.

employer and industry need / Assessment for learning

Live briefs, projects or equivalent authentic workplace learning experiences and/or assessments enable students, for example, to engage with external clients, develop their understanding through situated and experiential learning in real or simulated workplace contexts and deliver outputs to an agreed specification and deadline. Engagement with live briefs creates the opportunity for the development of student outcomes including excellence, professionalism, integrity and creativity. A live brief is likely to develop research and enquiry skills and can be linked to assessment if appropriate.

employability skills expected in a work-ready graduate are integral to the course - please see Rationale & Overview, section 5.1 "Learning, Teaching and Assessment Strategy". Alongside the teaching programme will run a series of extracurricular activities focusing on enhancement of student employability, designed in partnership with employers, professional bodies, our LSBU careers department and LSBU societies and the Enterprise Centre.

Inclusive teaching, learning and assessment Course content and teaching methods acknowledge the diversity of the student cohort

An inclusive curriculum incorporates images, examples, case studies and other resources from a broad range of cultural and social views reflecting diversity of the student cohort in terms of, for example, gender, ethnicity, sexuality, religious belief, socio-economic background etc. This commitment to inclusivity enables students to recognise themselves and their experiences in the curriculum as well as foster understanding of other viewpoints and identities.

All of our modules are delivered with a commitment to the inclusive curriculum.
All case studies, images and resources are drawn upon to reflect the diversity of our cohort/

The course has a diverse student cohort, and a team of equally diverse, experienced and empathetic teaching staff have traditionally ensured that the diversity of our student body, our University, and indeed our nation, is fully recognised in the nature and content of the learning and assessment materials used on the course.

Curricula informed by employer and industry need

Work-based learning

Opportunities for learning that is relevant to future employment or undertaken in a workplace setting are fundamental to developing student applied knowledge as well as developing work-relevant student outcomes such as networking, professionalism and integrity. Workbased learning can take the form of work experience, internships or placements as well as, for example, case studies, simulations and role-play in industry-standards settings as relevant to the

We deliver Applied Character Based education whereby student work on case study, live briefs from employers, they can go on placements, internships and work on simulations (eg. SimVenture). Development of the employability skills expected in a work-ready graduate are integral to the course. Employability and careers advice is embedded throughout the modules via guest speakers and alumni

AQE October 2017 Page 20 of 28

course. Work-based learning can be linked to assessment if appropriate.

input and also through peer to peer support.

All students have the option to take out a one year placement opportunity. This allows the student to gain valuable work experience alongside their degree.

Writing in the discipline is

Embedded learning development

Writing in the disciplines: Alternative formats

The development of student awareness, understanding and mastery of the specific thinking and communication practices in the discipline is fundamental to applied subject knowledge. This involves explicitly defining the features of disciplinary thinking and practices, finding opportunities to scaffold student attempts to adopt these ways of thinking and practising and providing opportunities to receive formative feedback on this. A writing in the disciplines approach recognises that writing is not a discrete representation of knowledge but integral to the process of knowing and understanding in the discipline. It is expected that assessment utilises formats that are recognisable and applicable to those working in the profession. For example, project report, presentation, poster, lab or field report, journal or professional article, position paper, case report, handbook, exhibition guide.

embedded throughout the programme and builds from level 4 upwards. Students develop their understanding of Business report writing, Client briefs, presenting information in number and cart format and **Business communications** more generally. Many of the modules are assessed via Presentation and pitching which are essential skills for the business professional. Development of critical thinking and scholarly report writing skills are integral parts of the assessment across the course's modules. An emphasis on the use of econometric techniques is introduced right from the start of the course. The assessments are tailored to the nature of the subject, which introduces a variety of elements such as essays ("Multinational Firms and Global Trade"), reports ("Intermediate Macroeconomics"), econometric reports ("Introduction to Econometrics"), presentations

("Contemporary Issues Facing the UK and World Economy")

AQE October 2017 Page 21 of 28

High impact pedagogies	Multi-disciplinary, interdisciplinary or interprofessional group-based learning experiences Building on experience of group working at level 4, at level 5 students should be provided with the opportunity to work and manage more complex tasks in groups that work across traditional disciplinary and professional boundaries and reflecting interprofessional work-place settings. Learning in multi- or interdisciplinary groups creates the opportunity for the development of student outcomes including inclusivity,	and conference participations ("Environmental Economics and Sustainability"). Students have the opportunity to work in our Business Solutions Center, an externally facing consultancy working on cross disciplinary projects with live customer briefs. In addition, they all have the opportunity to take up an internship or placement. All students have the opportunity to work in the curricular on live briefs supplied by employers.
Assessment for learning	Variation of assessment An inclusive approach to curriculum recognises diversity and seeks to create a learning environment that enables equal opportunities for learning for all students and does not give those with a particular prior qualification (e.g. A-level or BTEC) an advantage or disadvantage. An holistic assessment strategy should provide opportunities for all students to be able to demonstrate achievement of learning outcomes in different ways throughout the course. This may be by offering alternate assessment tasks at the same assessment point, for example either a written or oral assessment, or by offering a range of different assessment tasks across the curriculum.	Modules are assessed using a wide variety of methodologies, these include: Group work Individual work Presentations Peach Kuchma Essay Report Reflection Spreadsheet Diaries Pitching Posters Examination Test
		Most course works are built around case study and alternate assessments are made available where necessary. A mix of assessments are used at each level and on each programme and are appropriate to each discipline. Some are guided by

Appendix C: Terminology

[Please provide a selection of definitions according to your own course and context to help prospective students who may not be familiar with terms used in higher education. Some examples are listed below]

awarding body	a UK higher education provider (typically a university) with the power to award higher education qualifications such as degrees		
bursary	a financial award made to students to support their studies; sometimes used interchangeably with 'scholarship'		
collaborative provision	a formal arrangement between a degree-awarding body and a partner organisation, allowing for the latter to provide higher education on behalf of the former		
compulsory module	a module that students are required to take		

AQE October 2017 Page 24 of 28

contact hours	the time allocated to direct contact between a student and a member of staff through, for example, timetabled lectures, seminars and tutorials		
coursework	student work that contributes towards the final result but is not assessed by written examination		
current students	students enrolled on a course who have not yet completed their studies or been awarded their qualification		
delivery organisation	an organisation that delivers learning opportunities on behalf of a degree-awarding body		
distance-learning course	a course of study that does not involve face-to-face contact between students and tutors		
extracurricular	activities undertaken by students outside their studies		
feedback (on assessment)	advice to students following their completion of a piece of assessed or examined work		
formative assessment	a type of assessment designed to help students learn more effectively, to progress in their studies and to prepare for summative assessment; formative assessment does not contribute to the final mark, grade or class of degree awarded to students		

AQE October 2017 Page 25 of 28

higher education provider	organisations that deliver higher education			
independent learning	learning that occurs outside the classroom that might include preparation for scheduled sessions, follow-up work, wider reading or practice, completion of assessment tasks, or revision			
intensity of study	the time taken to complete a part-time course compared to the equivalent full-time version: for example, half-time study would equate to 0.5 intensity of study			
lecture	a presentation or talk on a particular topic; in general lectures involve larger groups of students than seminars and tutorials			
learning zone	a flexible student space that supports independent and social earning			
material information	information students need to make an informed decision, such as about what and where to study			
mode of study	different ways of studying, such as full-time, part-time, e-learning or work-based learning			
modular course	a course delivered using modules			
module	a self-contained, formally structured unit of study, with a coherent and explicit set of learning outcomes and assessment criteria; some providers use the word 'course' or 'course unit' to refer to individual modules			
national teaching fellowship	a national award for individuals who have made an outstanding impact on student learning and the teaching profession			
navigability (of websites)	the ease with which users can obtain the information they require from a website			
optional module	a module or course unit that students choose to take			
performance (examinations)	a type of examination used in performance- based subjects such as drama and music			
professional body	an organisation that oversees the activities of a particular profession and represents the interests of its members			
prospective student	those applying or considering applying for any programme, at any level and employing any mode of study, with a higher education provider			

AQE October 2017 Page 26 of 28

regulated course	a course that is regulated by a regulatory body			
regulatory body	an organisation recognised by government as being responsible for the regulation or approval of a particular range of issues and activities			
scholarship	a type of bursary that recognises academic achievement and potential, and which is sometimes used interchangeably with 'bursary'			
semester	either of the parts of an academic year that is divided into two for purposes of teaching and assessment (in contrast to division into terms)			
seminar	seminars generally involve smaller numbers than lectures and enable students to engage in discussion of a particular topic and/or to explore it in more detail than might be covered in a lecture			
summative assessment	formal assessment of students' work, contributing to the final result			
term	any of the parts of an academic year that is divided into three or more for purposes of teaching and assessment (in contrast to division into semesters)			
total study time	the total time required to study a module, unit or course, including all class contact, independent learning, revision and assessment			
tutorial	one-to-one or small group supervision, feedback or detailed discussion on a particular topic or project			
work/study placement	a planned period of experience outside the institution (for example, in a workplace or at another higher education institution) to help students develop particular skills, knowledge or understanding as part of their course			
workload	see 'total study time'			
written examination	a question or set of questions relating to a particular area of study to which candidates write answers usually (but not always) under timed conditions			

AQE October 2017 Page 27 of 28

Graduates should be able to demonstrate:	Knowledge And Understanding	Intellectual	Practical	Transferable
Understanding of economic concepts, principles and tools	A1	B1, B2		
Understanding of distinctive economic theories, interpretations and modelling approaches, and their competent use	A3	B5		
Proficiency in quantitative methods and computing techniques and know how to use these techniques and methods effectively across a range of problems			C1, C2, C3	D1, D4
Understanding of the sources and content of economic data and evidence and of those methods that might be applied appropriately to the analysis of such data		B1, B3		D4
Know how to apply economic reasoning to policy issues in a critical manner	A5	B4, B6		D1
An understanding of the historical, political, institutional, international, social and environmental contexts in which specific economic analysis is applied		B1, B2, B4		
Knowledge in an appropriate number of specialised areas in economics, as well as an appreciation of the research literature in these areas	A4			D3
Familiarity with the possibility that many economic problems may admit of more than one approach.	A2	B2
