

# Renewable Energy Report

April 2021 - March 2022

London South Bank University

## Introduction

This report provides an overview of London South Bank University renewable electricity supply for the period April 2021 to March 2022, provided by way of Renewable Energy Guarantee of Origin (REGO) backed power.

Under applicable greenhouse gas reporting standards, this enables London South Bank University to state it receives a zero carbon electricity supply from EDF for specific sites.

## Renewable for Business

Renewable for Business is one of EDF's verifiable renewable electricity supply products for I&C customers, which is fully backed by REGOs. The Renewable product, and its adherence to the GHG Protocol 'Scope 2' guidance and UK Fuel Mix Disclosure regulations, is governed by strict internal processes.

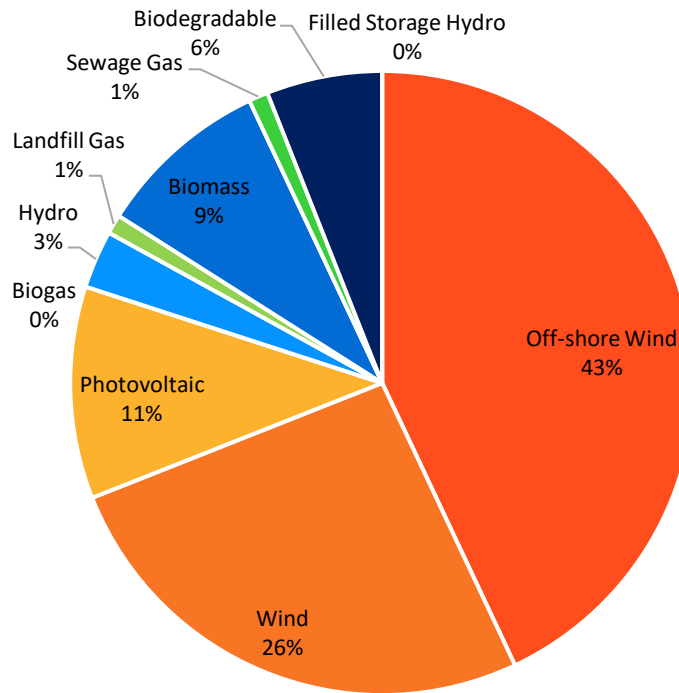

The Carbon Trust has assured that the electricity supplied for the year ended in 31 March 2022 under the following products – Renewable for Business, Select Renewable, Clean Renewable and UK Renewable – all of which are under the umbrella of the “Renewable tariffs” is 100% covered by Renewable Certificates that have been obtained and retired by EDF, in line with the WRI GHG Protocol Scope 2 Guidance (2015).

REGOs are electronic certificates awarded to accredited renewable generators for each Megawatt Hour (MWh) of power they generate. They are primarily used by UK electricity suppliers for Fuel Mix Disclosure purposes, to certify the proportion of renewable energy within their overall supply mix.

A REGO is regarded as having the attributes necessary to convey the low carbon benefits of renewable energy in the UK. A robust internal accounting process is required in order to demonstrate that no double-counting has taken place.

Figure 1 illustrates the renewable sources used to back renewable electricity supply between April 2021 and March 2022. Appendix A details the REGOs assigned by EDF for London South Bank University.

Figure 1: EDF Renewable Fuel Mix 2021/22

EDF supplied London South Bank University with 10,569 Megawatt Hours (MWh) of renewable (REGO backed) energy during the period 1st April 2021 to 31st March 2022.

## EDF product labels

Each year EDF publishes ‘product labels’ alongside its overall Fuel Mix data, which detail the composition of each energy type it supplies. Table 1 summarises the attributes of its Renewable product against the UK average fuel mix. The carbon intensity, or ‘emissions factor’, of the product is 0 grams of Carbon Dioxide per kilowatt hour, compared to a national average of 198.

Table 1: EDF product labels versus UK average:

EDF’s fuel mix per tariff or product	Coal	Gas	Nuclear	Renewable	Other	CO <sub>2</sub> g/kWh
Zero Carbon (1)	0.0%	0.0%	100.0%	0.0%	0.0%	0
Renewable (2)	0.0%	0.0%	0.0%	100.0%	0.0%	0
All other (3)	4.4%	40.5%	49.6%	2.1%	3.4%	221
UK average fuel mix	3.8%	38.5%	16.1%	38.7%	2.9%	198

1 All Zero Carbon for Business tariffs and products (formerly Blue for Business)

2 All renewable tariffs and products (includes EV tariff)

3 All other tariffs and products - tariffs not referred to as Zero Carbon or Renewable

## Greenhouse Gas reporting

The Greenhouse Gas Protocol (GHG Protocol) is the most widely used international accounting tool for organisations to understand, quantify, and manage greenhouse gas emissions. It is also the standard used by CDP<sup>1</sup>, the world's largest carbon reporting initiative for businesses. Under GHG Protocol Scope 2 Guidance, companies are advised to report greenhouse gas emissions from purchased energy using "Market-based" (contract-specific) emissions factors alongside the "Location-based" figure (local Grid average).

The comprehensive management processes underpinning the Renewable products enable you to report a Market-based emissions factor of zero grams CO<sub>2</sub> per kilowatt hour for electricity purchased from EDF.

Further information on the GHG Protocol is available here: <http://www.ghgprotocol.org/>

## Appendix A: Renewable electricity supply

EDF supplied London South Bank University with 10,569 Megawatt Hours (MWh) of electricity backed by REGOs during the period 1 April 2021 to 31 March 2022. The REGOs assigned by EDF are detailed in Table 2. Each REGO represents 1 MWh of renewable electricity and has a unique identifier.

Table 2: REGOs assigned for London South Bank University.

Month	Start Certificate ID	End Certificate ID	Technology	No of Certificates
01/09/2021	G00006MWEN000000000010921300921GEN	G00006MWEN0000000321010921300921GEN	Biodegradable	322
01/10/2021	G01157FWEN0000019108011021311021GEN	G01157FWEN0000021675011021311021GEN	Off-shore Wind	2,568
01/11/2021	G00788NWEN000000000011121301121GEN	G00788NWEN0000002561011121301121GEN	Wind	2,562
01/01/2022	G00788NWEN000000000010122310122GEN	G00788NWEN0000002558010122310122GEN	Wind	2,559

EDF has ringfenced the above REGOs for London South Bank University and they will not be allocated or counted against any other claim other than EDF's overall Fuel Mix Disclosure.

The certificate IDs are provided for information only and do not imply any transfer of right of ownership or recourse to the original generation source. Any information linked to these certificates, aside from the generation technology, is not to be made public or disclosed to any third party.

## **e-reports – a better way of working**

Why an e-report? At EDF we are committed to using the most sustainable working practices wherever possible and this includes when delivering communications to our customers.

E-reports significantly reduce the volume of printed material we need, reducing our carbon footprint.

Our customers appreciate e-reports because they offer timely delivery of easy to access information in an ideal format for the modern screen-based working environment.
