B. Course Aims and Features	
Distinctive features of course	<p>This PgC, PgD, MSc suite of awards develops radiographers to competently perform reporting activities within their scope of practice.</p> <p>The course offers education in the latest theoretical and clinical developments relating to radiographic reporting in diagnostic imaging. It also develops research skills and critical thinking and provides the opportunity to conduct a research project, laying the foundations for independent research in the future and an extended evidence-based practitioner.</p>
Course Aims	<p>This PgC, PgD, MSc Radiographic Reporting course aims to:</p> <ol style="list-style-type: none"> 1 Provide the opportunity to critically reflect on theory, contemporary research, and evidence-based practice related to radiographic reporting in diagnostic imaging procedures in order to inform personal and professional practice and enhance stakeholder experience. 2 Develop advanced knowledge and skills through the critical appraisal of theory and practice related to radiographic reporting within the context of UK and international health provisions. 3 Develop the skills that will support active engagement in the process of lifelong learning and CPPD through critical reflection, to influence and enhance professional practice and future employability. 4 Enable continued professional development through independent and multi-disciplinary learning, thereby demonstrating maintenance of the standard of proficiency articulated by the Health and Care Professions Council (HCPC) and other relevant professional bodies
Course Learning Outcomes	<p>1) Students gain knowledge and understanding such that they are able to:</p> <ol style="list-style-type: none"> A1 Synthesise and critically analyse research and evidence-based practice which underpins the principles and theories of current methods in Diagnostic Imaging in the wider context of healthcare service and delivery. A2 Critically reflect on and develop knowledge of practice to enhance future professional standing and employability through the application of lifelong learning and continued professional development. A3 Justify, utilise, and apply knowledge in order to undertake research and service evaluation and improvement in Diagnostic Imaging; to ensure optimal stakeholder experience. A4 Critically discuss and analyse legal, ethical and professional issues relating to radiographic reporting and multi-disciplinary working in a diagnostic imaging environment A5 Develop critically, strategically and in depth a topic or area of interest arising from the work done within the taught postgraduate framework and in the student's area of academic or professional interest.

PgC = A1, A2, A4 PgD = A1 – A4, MSc = A1 – A5

2) Students will develop their intellectual skills such that they are able to:

- B1 Critically evaluate research and evidence-based practice that underpins radiographic reporting practice.
- B2 Synthesise and critically reflect on the theory that informs patient management and service delivery in Diagnostic Imaging and reporting.
- B3 Utilise a range of information and data to justify decision making in new, varied, and challenging situations related to Diagnostic Imaging and reporting.
- B4 Critically reflect upon the professional and legal aspects of role extension, reporting, service improvement, and advanced practice in relation to health care policy and service delivery.

PgC, PgD, MSc = B1 - B4

3) Students will acquire and develop practical skills such that they are able to:

- C1 Critically evaluate the range of methods and modalities in Diagnostic Imaging and reporting with relation to patient management, quality, and service delivery.
- C2 Apply new theories and knowledge to aspects of Diagnostic Imaging and reporting which require management of challenging or complex situations.
- C3 Critically reflect on individual role and learning needs and that of others in relation to extended reporting practice and employability skills.
- C4 Comply with the quality standards required for advanced practice in reporting
- C5 Employ effective strategies, knowledge and the confidence necessary to apply and reflect on theory, research and evidence and manage a research project or original inquiry.

PgC, PgD = C1- C4, MSc = C1 – C5

4) Students will acquire and develop transferable skills such that they are able to:

- D1 Critically appraise, and actively contribute, to the contemporary research and evidence that underpins radiographic reporting practice.
- D2 Undertake critical reflection in relation to individual practice and maintain core competencies and continuing professional development in reporting.
- D3 Critically appraise and lead new developments in relation to individual reporting practice, patient management, service delivery, and quality mechanisms.
- D4 Critically evaluate inter-professional and stakeholder-centred practice in the context of individual professional reporting

	<p>practice and in a wider health care setting both in the UK and internationally</p> <p>D5 Demonstrate research skills through the identification, retrieval and critical analysis of published material and ability to write a feasible high quality proposal.</p> <p><i>PgC = D2 - D4, PgD = D1 – D4, MSc = D1 – D5</i></p>
<p style="text-align: center;">C. Teaching and Learning Strategy</p> <p>I. Face-to-face approaches that will include lectures, group work and discussion and feedback, workshops, tutorials.</p> <p>II. Use of a virtual learning environment (VLE) to engage students with self-directed learning activities.</p> <p>III. Blended learning activities</p> <p>IV. Structured feedback to develop literature search, analysis and synthesis skills</p> <p>V. Mentor (academic & clinical) sessions to identify individual needs</p> <p>VI. Self and peer formative assessment</p>	
<p style="text-align: center;">D. Assessment</p> <p>I. Conventional 'essay-style' assignment.</p> <p>II. Article format, suitable for submission to a peer reviewed journal.</p> <p>III. Case-study</p> <p>IV. Clinical portfolio</p> <p>V. Dissertation</p> <p>VI. Objective structured clinical evaluation (OSCE)</p> <p>VII. Image evaluation</p>	
<p style="text-align: center;">E. Academic Regulations</p> <p>The University's Academic Regulations apply for this course. Any course specific protocols will be identified here.</p>	

F. Entry Requirements

Professional qualifications

- (i) A degree or diploma in diagnostic radiography
- (ii) Currently working in areas where appropriate experience of reporting images can be obtained. Normally they should have had a minimum of the equivalent of two years' full time experience in general radiography within the last five years.

Level of English language capability:-

If English is not the first language, students must have an IELTS average score of 7.0 on entry into the course. No individual elements should be below 7.0.

It will be a requirement for the student to provide written agreement from their Radiology Department, indicating that the necessary experience required is available to achieve the competences which these modules address.

A degree or diploma in diagnostic radiography

Use of Prior Credit (APL/APEL): prior certificated credit or prior experiential credit may be used within the Course in the following ways:-

Evidence of relevant academic and clinical expertise may be considered through the University's APL and APEL procedures for Recognition of Prior Learning. Consequently, students may be able to claim appropriate Master's level credits as approved by the University.

Students may be able to import specific credits into the MSc in support of previous relevant certified learning (APL) or provide evidence of experiential learning for they may be awarded credit (APEL). This is currently permitted up to a half of an overall award (90 credits of a 180 credit Master's).

The credits offered for APL to be considered must be current, at Master's level, and of an equivalent scale. Claims under the APL scheme will be considered by the course director and must be supported by acceptable evidence of proof of learning (for example transcripts, certificates, and module descriptors).

G. Course structure(s)

The **MSc Radiographic Reporting** course (180 Credits) comprises;

Mandatory Modules

- Dissertation (40 or 60 Credit options)
- Research in Health & Social Care (20 Credit options)
- Foundations of Image Interpretation (20 Credits)

Remaining credits may be made up of a selection from the following **specialist** modules:-

- Radiographic Reporting: Musculoskeletal (40)
- Radiographic Reporting: Axial Skeleton (20)
- Advances in Specialised Skeletal Imaging (20)
- Radiographic Chest Reporting (40)

The following **non-specialist** module may be selected as an alternative to one of the specialist modules above:-

Enhancing Practice through Work Based Learning (20)

The **PgD Radiographic Reporting** course (120 Credits) comprises;

Mandatory Modules;

- Research in Health & Social Care (20 Credits)
- Foundations of Image Interpretation (20)

Remaining credits may be made up of a selection from the following **specialist** modules:-

- Radiographic Reporting: Musculoskeletal (40)
- Radiographic Reporting: Axial Skeleton (20)
- Advances in Specialised Skeletal Imaging (20)
- Radiographic Chest Reporting (40)

The following **non-specialist** module may be selected as an alternative to one of the specialist modules above:-

Enhancing Practice through Work Based Learning (20)

The **PgC Radiographic Reporting** course (60 Credits) comprises;

Mandatory

- Foundations of Image Interpretation (20)

Remaining credits may be made up of a selection from the following **specialist** modules:-

- Radiographic Reporting: Musculoskeletal (40)
- Radiographic Reporting: Axial Skeleton (20)
- Advances in Specialised Skeletal Imaging (20)
- Radiographic Chest Reporting (40)

The following **non-specialist** module may be selected as an alternative to one of the specialist modules above:-

- Enhancing Practice through Work Based Learning (20)

Placements information

None

H. Course Modules

Module Code	Module Title	Level	Semester	Credit value
AHP_7_065	Foundations of Image Interpretation	7	1 or 2	20
AHP_7_120	Radiographic Reporting: Musculoskeletal	7	1 & 2	40
AHP_7_100	Radiographic Reporting: Axial Skeleton	7	1 & 2	20
AHP_7_019	Advances in Specialised Skeletal Imaging	7	1 or 2	20
AHP_7_063	Radiographic Chest Reporting	7	1 & 2	40
AHP_7_097	Enhancing Practice through Work Based Learning (Taught)	7	1 & 2	20
AHP_7_114	Enhancing Practice through Work Based Learning (On-line)	7	1 & 2	20
TAR_7_014	Research in Health and Social Care (Online)	7	1 or 2	20
TAR_7_011 _*	Research in Health and Social Care (Taught)	7	1 or 2	20
AHP_7_104	Dissertation - Allied Health Sciences (60 credits) (Online)	7	1 & 2	60
AHP_7_051	Dissertation – Allied Health Sciences (Taught - 60 credits)	7	1 & 2	60
AHP_7_098	Dissertation - Allied Health Sciences (40 credits) (Online)	7	1 & 2	40
AHP_7_064	Dissertation – Allied Health Sciences (Taught- 40 credits)	7	1 & 2	40

I. Timetable information

Timetables will be on moodle

J. Costs and financial support

Course related costs

Tuition fees/financial support/accommodation and living costs

- Information on tuition fees/financial support can be found by clicking on the following link - <http://www.lsbu.ac.uk/courses/undergraduate/fees-and-funding> or
- <http://www.lsbu.ac.uk/courses/postgraduate/fees-and-funding>
- Information on living costs and accommodation can be found by clicking the following link-
K. <https://my.lsbu.ac.uk/my/portal/Student-Life-Centre/International-Students/Starting-at-LSBU/#expenses>

List of Appendices

- Appendix A: Curriculum Map
- Appendix B: Personal Development Planning (postgraduate courses)
- Appendix C: Terminology
- Appendix D: Modules

Appendix A: Curriculum Map

This map provides a design aid to help course teams identify where course outcomes are being developed, taught and assessed within the course. It also provides a checklist for quality assurance purposes and may be used in validation, accreditation and external examining processes. Making the learning outcomes explicit will also help students to monitor their own learning and development as the course progresses.

Appendix B: Personal Development Planning

A variety of terms are used in higher education to describe a process undertaken by individuals to gather evidence on, record and review their own learning and achievement, and identify ways in which they might improve themselves academically and more broadly. The term Personal Development Planning (PDP) is proposed to describe a structured process undertaken by an individual to reflect upon their own learning, performance and/or achievement and to plan for their personal educational and career development. The purpose of this tool is to help HE teaching staff to explain where PDP is being used within a course or portfolio of modules.

Approach to PDP	Level 7
1 Supporting the development and recognition of skills through the personal tutor system.	Each student will engage with an allocated personal tutor at least once during each module to discuss their development Evidence –Records of tutorials and personal tutor reviews.
2 Supporting the development and recognition of skills in academic modules/modules.	All students are offered a personal tutorial during the academic module. Students on taught modules will be introduced to the learning support team/ service during the induction for the course. Students will be encouraged to submit formative work prior to the summative submission and receive feedback. Written feedback is given with all summative assignment submissions. Evidence – Formative assignments, progress interviews, assignment feedback
3 Supporting the development and recognition of skills through purpose designed modules/modules.	Each module has a specific focus on different aspects of learning, teaching, evaluation, portfolio development, curriculum perspectives, and research. Each module is specifically designed to develop skills in these areas Evidence – Module guides
4 Supporting the development and recognition of skills through research projects and dissertations works	All assessed work must be underpinned by theoretical concepts that demonstrate the student's understanding of the process of selecting the appropriate methods of teaching, learning and evaluating. This develops decision making skills Evidence – Module guides
5 Supporting the development and recognition of career management skills.	The course team work closely with the healthcare organisations to ensure that the skills that student are acquiring are relevant to modern provision. Evidence- Stakeholder meetings and feedback
6 Supporting the development and recognition of career management skills through work placements or work experience.	Continuing experience facilitates role development and the impact students have on healthcare practice. Evidence –Assessment of competence
7 Supporting the development of skills by recognising that they can be developed	Students are encouraged to maintain a healthy work/life balance Evidence –Records of tutorials and personal tutor reviews.

through extra curricula activities.	
8 Supporting the development of the skills and attitudes as a basis for continuing professional development.	<p>Assignments are designed to engage in processes that encourage consideration of personal CPD enabling the development of skills to promote that of others</p> <p>Evidence – Personal CPD portfolio</p>
9 Other approaches to personal development planning.	<p>Students are encouraged to complete a reflective journal throughout the duration of the course illustrating how they have achieved the learning outcomes and feed CPD.</p> <p>Evidence – Personal CPD portfolio</p>
10 The means by which self-reflection, evaluation and planned development is supported e.g. electronic or paper-based learning log or diary.	<p>Students are supported throughout the course and individual modules. As adult learners, students will be invited to support reflections by their preferred method (written, electronic, audio or visual). Tutorials will also include reflection</p> <p>Evidence – Personal CPD portfolio</p>

Appendix C: Terminology

[Please provide a selection of definitions according to your own course and context to help prospective students who may not be familiar with terms used in higher education. Some examples are listed below]

awarding body	a UK higher education provider (typically a university) with the power to award higher education qualifications such as degrees
bursary	a financial award made to students to support their studies; sometimes used interchangeably with 'scholarship'
collaborative provision	a formal arrangement between a degree-awarding body and a partner organisation, allowing for the latter to provide higher education on behalf of the former
compulsory module	a module that students are required to take
contact hours	the time allocated to direct contact between a student and a member of staff through, for example, timetabled lectures, seminars and tutorials
coursework	student work that contributes towards the final result but is not assessed by written examination
current students	students enrolled on a course who have not yet completed their studies or been awarded their qualification
delivery organisation	an organisation that delivers learning opportunities on behalf of a degree-awarding body
distance-learning course	a course of study that does not involve face-to-face contact between students and tutors
extracurricular	activities undertaken by students outside their studies
feedback (on assessment)	advice to students following their completion of a piece of assessed or examined work
formative assessment	a type of assessment designed to help students learn more effectively, to progress in their studies and to prepare for summative assessment; formative assessment does not contribute to the final mark, grade or class of degree awarded to students

higher education provider	organisations that deliver higher education
independent learning	learning that occurs outside the classroom that might include preparation for scheduled sessions, follow-up work, wider reading or practice, completion of assessment tasks, or revision
intensity of study	the time taken to complete a part-time course compared to the equivalent full-time version: for example, half-time study would equate to 0.5 intensity of study
lecture	a presentation or talk on a particular topic; in general lectures involve larger groups of students than seminars and tutorials
learning zone	a flexible student space that supports independent and social learning
material information	information students need to make an informed decision, such as about what and where to study
mode of study	different ways of studying, such as full-time, part-time, e-learning or work-based learning
modular course	a course delivered using modules
module	a self-contained, formally structured unit of study, with a coherent and explicit set of learning outcomes and assessment criteria; some providers use the word 'course' or 'course unit' to refer to individual modules
national teaching fellowship	a national award for individuals who have made an outstanding impact on student learning and the teaching profession
navigability (of websites)	the ease with which users can obtain the information they require from a website
optional module	a module or course unit that students choose to take
performance (examinations)	a type of examination used in performance-based subjects such as drama and music
professional body	an organisation that oversees the activities of a particular profession and represents the interests of its members
prospective student	those applying or considering applying for any programme, at any level and employing any mode of study, with a higher education provider

regulated course	a course that is regulated by a regulatory body
regulatory body	an organisation recognised by government as being responsible for the regulation or approval of a particular range of issues and activities
scholarship	a type of bursary that recognises academic achievement and potential, and which is sometimes used interchangeably with 'bursary'
semester	either of the parts of an academic year that is divided into two for purposes of teaching and assessment (in contrast to division into terms)
seminar	seminars generally involve smaller numbers than lectures and enable students to engage in discussion of a particular topic and/or to explore it in more detail than might be covered in a lecture
summative assessment	formal assessment of students' work, contributing to the final result
term	any of the parts of an academic year that is divided into three or more for purposes of teaching and assessment (in contrast to division into semesters)
total study time	the total time required to study a module, unit or course, including all class contact, independent learning, revision and assessment
tutorial	one-to-one or small group supervision, feedback or detailed discussion on a particular topic or project
work/study placement	a planned period of experience outside the institution (for example, in a workplace or at another higher education institution) to help students develop particular skills, knowledge or understanding as part of their course
workload	see 'total study time'
written examination	a question or set of questions relating to a particular area of study to which candidates write answers usually (but not always) under timed conditions

Appendix D: Modules

Module Title	Foundations of Image Interpretation (Online)	
Course(s)	<i>PgC/PgD/MSc Radiographic Reporting OR PgC/PgD/MSc Diagnostic Imaging</i>	
Level	7	
Semester	1	
Ref No:	AHP_7_065	
Credit Value	20 credit points	
Student Study hours	Total Contact Blended (Learning and Teaching Activities) Student Managed (Independent Guided Study)	200 hours There is no on site teaching 30 170
Pre-requisite learning	None	
Co-requisites	Student support for studying at Masters level is to be discussed with the pathway advisor. Students who have not previously undertaken study at academic Level 7 (Masters level) are advised to consider the module: Preparation for Masters Level Study (see CPPD online prospectus for more details).	
Excluded combinations	None	
Module Coordinator	Jerry Hughes	
Parent Department	Allied Health Sciences – Diagnostic Radiography	
Parent Course	PgC/PgD/MSc Radiographic Reporting OR PgC/PgD/MSc Diagnostic Imaging	
Description	This module introduces the principles of image perception and the opportunities for error in decision making. The implications for practice are considered from abnormality signalling through to written reporting, for integration within a modern healthcare system.	
JACS Code	B821	
Aims	The aim of this module is to enable health care professionals to develop an understanding of the principles of image perception and decision making factors, awareness of error by investigating the ways in which decision making error occurs in diagnostic imaging relative to the common processes adopted in clinical practice and the associated implications.	
Learning outcomes	<p>By engaging successfully with this module the student will be able to:</p> <p>Knowledge and Understanding</p> <ul style="list-style-type: none"> • Explain the underlying principles of image perception • Evaluate the practical and functional implications of viewing modalities in relation to reporting. <p>Intellectual Skills</p> <ul style="list-style-type: none"> • Critically evaluate the causes of error and the implications to practice • Evaluate the implications of decision making within the wider context of healthcare <p>Practical Skills</p>	

	<ul style="list-style-type: none"> • Demonstrate understanding of the cognitive and psychological concepts related to evaluation of diagnostic images • Critically evaluate the common output approaches to decision making in radiographic imaging • Demonstrate understanding of the basis and rationale for radiographic report formulation <p>Transferable Skills</p> <ul style="list-style-type: none"> • Undertake critical reflection in relation to individual practice and maintain core competencies and continuing professional development in reporting. • Critically appraise and lead new developments in relation to individual reporting practice, patient management, service delivery, and quality mechanisms. • Critically evaluate inter-professional and stakeholder-centred practice in the context of individual professional reporting practice and in a wider health care setting both in the UK and internationally
Employability	<p>Professionals undertaking this module will be able to use their knowledge and skills to enhance the service they provide in accordance with their employer's policies. Completion of the module may be used as evidence to support career progression, particularly where making reliable decisions from radiographic images is desirable or essential requirement.</p>
Teaching & Learning Pattern	<p>Learning for this module is based on distance learning principles (e-learning) using a VLE as the platform for delivery. The overall approach to learning and teaching throughout the module facilitates an active learning experience which engages the learner in, and promotes ownership and autonomy of learning. This strategy links development needs with professional practice involving the use of radiographic images commonly seen in practice.</p> <p>Active learning is encouraged using a series of structured activities throughout the module. Online learning objects and e-lectures will be used to identify and introduce the main themes of the subject area and to indicate themes for self-directed study. A range of media is used to present learning materials including slide presentations (some with audio accompaniment) and web-based learning packages. Directed reading of book chapters, online media, and case studies will be used to link clinical findings and image appearances.</p>
Indicative content	<p>The indicative module contents include:</p> <ul style="list-style-type: none"> • principles of image perception • principles of report formulation • inter-observer and intra-observer variation • principles and consequent use of alternative modalities for equivocal findings • causes of error and misdiagnosis • approaches to communicating findings • assessment of performance (test, audit, and statistical underpinning) • professional responsibility and the law • Medico-legal aspects of role extension and delegation of medical tasks.
Assessment	<p>Formative Assessment</p> <p>Activities during the module will develop the necessary skills required for image review, identification of error types, and analysis of error. Peer and tutor review of these activities will be encouraged via the use of online discussion forums and feedback is provided via tutor, peer, and self-evaluation.</p>

	<p>Summative Assessment</p> <p>4000 word essay based around the foundations of image interpretation with critical appraisal of contemporary literature.</p> <p>The pass mark is 50%. 100% weighting.</p>

Module Title	Radiographic Reporting: Musculoskeletal	
Course(s)	<i>PgC/PgD/MSc Radiographic Reporting OR PgC/PgD/MSc Diagnostic Imaging</i>	
School	<input type="checkbox"/> ASC <input type="checkbox"/> ACI <input type="checkbox"/> BEA <input type="checkbox"/> BUS <input type="checkbox"/> ENG <input checked="" type="checkbox"/> HSC <input type="checkbox"/> LSS	
Division	Division for Radiography & ODP	
Parent Course	<i>PgC/PgD/MSc Radiographic Reporting OR PgC/PgD/MSc Diagnostic Imaging</i>	
Level	7	
Module Code:	AHP_7_120	
JACS Code	B821	
Credit Value	40 credit points	
Student Study hours	Total	400 hours
	Contact	48
	Blended (Learning and Teaching Activities)	52
	Student Managed (Independent Guided Study)	200
	Mentor Supervised reporting	100
Pre-requisite learning	<p>Students should normally be qualified radiographers, registered and currently working in areas where appropriate experience of reporting images of the musculoskeletal system can be obtained.</p> <p>The student will need to provide written agreement from their Radiology Department, indicating that the necessary experience required is available to achieve the competence which this unit addresses.</p>	
Co-requisites	“Foundations of Image interpretation” module or equivalent at another university	
Excluded combinations	None	
Module Coordinator	Michael Williams michael.william@lsbu.ac.uk	
Description	This module enables the participant to achieve competence in the practice of radiographic reporting of the musculoskeletal system. The majority of the study element will be in the clinical environment working with a mentor in partnership with the module coordinator to ensure all academic components are met. Participants will be operating within the healthcare environment and must have access to the prescribed clinical practice which must include a mix of acute and non-acute musculoskeletal cases for review.	
Aims	The aim of this module is to develop skills in radiographic reporting of radiographic appearances of the musculoskeletal system.	
Learning outcomes	On completion of this module, students will be able to: Knowledge and Understanding:	

	<ul style="list-style-type: none"> • Recognise the anatomical, and the pathological and physiological considerations related to the musculoskeletal system in the context of radiographic appearances. • Accurately interpret the appearances of the radiographic image and appropriately communicate findings according to national guidelines. <p>Intellectual Skills</p> <ul style="list-style-type: none"> • Analyse the impact of pathologies, age, ethnicity, and gender, relative to patient presentation • Building upon existing knowledge of how the quality of the radiographic examination can affect the accuracy of the report. • Critically evaluate mechanisms of injury and their seen or expected appearances <p>Practical Skills</p> <ul style="list-style-type: none"> • Critically evaluate the accuracy of reports so that they conform with effective written communication. • Discuss the radiological appearances of cases in both radiological and multidisciplinary team meetings. <p>Transferable Skills</p> <ul style="list-style-type: none"> • Appraise and incorporate the legislation in respect of professional practice and accountability. • Enable the use of reporting audit in practice (developed as part of the Foundations of Image Interpretation module). • Demonstrate multidisciplinary team working skills. 								
Employability	Professionals undertaking this module will be able to use their knowledge and skills to enhance the service they provide in accordance with their employer's policies. Completion of the module may be used as evidence to support career progression, to include musculoskeletal system reporting as part of an Advanced Practitioner role								
Teaching & Learning Pattern	<p>Contact hours includes the following: 48</p> <table border="0"> <tr> <td><input checked="" type="checkbox"/> Lectures</td> <td><input type="checkbox"/> Group Work:</td> </tr> <tr> <td><input type="checkbox"/> Seminars</td> <td><input type="checkbox"/> Tutorial:</td> </tr> <tr> <td><input type="checkbox"/> Laboratory</td> <td><input checked="" type="checkbox"/> Workshops</td> </tr> <tr> <td><input type="checkbox"/> Practical</td> <td><input type="checkbox"/> VLE Activities</td> </tr> </table>	<input checked="" type="checkbox"/> Lectures	<input type="checkbox"/> Group Work:	<input type="checkbox"/> Seminars	<input type="checkbox"/> Tutorial:	<input type="checkbox"/> Laboratory	<input checked="" type="checkbox"/> Workshops	<input type="checkbox"/> Practical	<input type="checkbox"/> VLE Activities
<input checked="" type="checkbox"/> Lectures	<input type="checkbox"/> Group Work:								
<input type="checkbox"/> Seminars	<input type="checkbox"/> Tutorial:								
<input type="checkbox"/> Laboratory	<input checked="" type="checkbox"/> Workshops								
<input type="checkbox"/> Practical	<input type="checkbox"/> VLE Activities								
Indicative content	<ul style="list-style-type: none"> • All musculoskeletal system radiographic cases should be considered (paediatric, acute, non-acute etc.) • Physiology involving the musculoskeletal system. • Radiological anatomy and pathology of the musculoskeletal system. • Strategies for the reporting of radiographs of the musculoskeletal system. • Specific considerations of image evaluation relating to the musculoskeletal system. 								

	<ul style="list-style-type: none"> • Appearances of degeneration, pathology and congenital defects to the skeleton. • Principles of clinical evaluation of patients with trauma to the musculoskeletal system, mechanisms of injury, healing processes, patient management. • Overview of orthopaedic assessments and treatments related to the musculoskeletal system.
Assessment	<p><u>Formative Assessment</u></p> <p>Image interpretation tests and case study presentations are integrated into the module as scaffolding for the summative assessment.</p> <p><u>Summative assessment:</u></p> <p>Element 1 - Exam 1 Image Reporting (Pass/Fail) OSCE a student must demonstrate accuracy and achieve a mark of 90% accuracy in this element in order to pass. This will be assessed by students writing radiological reports. Two days (4 sessions) 120 mixed cases, During the second semester from commencement of the module. Reports may be in bullet point form. The students must have attempted reporting on a minimum of 500 mixed cases before they can sit exam 1, this is demonstrated by the portfolio.</p> <p>Element 2 – Exam 2: 2 hour OSCE Weighting 100% Pass Mark 50% Will involve both theoretical knowledge assessment and reporting skills.</p> <p>Element 3 – CW1: Clinical Portfolio (Pass/Fail) Students will undertake monthly audits of reporting practice and by reflection and discussion with mentor, learn from any errors to improve accuracy over the module. A log of cases should be recorded in this portfolio. A minimum of 750 mixed cases must be recorded. This portfolio should demonstrate a consistency of at least 90% accuracy in all skeletal reporting for at least 250 cases following successful completion of Exam 1.</p> <p>All elements must be passed in order to pass the module</p>
Mode of resit assessment (if applicable)	Summative assessment: Same as above.

Module Title	Radiographic Reporting: Axial Skeleton										
Course(s)	<i>PgC/PgD/MSc Radiographic Reporting OR PgC/PgD/MSc Diagnostic Imaging</i>										
Level	7										
Semester	1 & 2										
Ref No:	AHP_7_100										
Credit Value	20 credit points										
Student Study hours	<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 60%;">Total</td> <td style="text-align: right;">200 hours</td> </tr> <tr> <td>Contact</td> <td style="text-align: right;">24</td> </tr> <tr> <td>Blended (Learning and Teaching Activities)</td> <td style="text-align: right;">26</td> </tr> <tr> <td>Student Managed (Independent Guided Study)</td> <td style="text-align: right;">100</td> </tr> <tr> <td>Mentor Supervised reporting</td> <td style="text-align: right;">50</td> </tr> </table>	Total	200 hours	Contact	24	Blended (Learning and Teaching Activities)	26	Student Managed (Independent Guided Study)	100	Mentor Supervised reporting	50
Total	200 hours										
Contact	24										
Blended (Learning and Teaching Activities)	26										
Student Managed (Independent Guided Study)	100										
Mentor Supervised reporting	50										
Pre-requisite learning	Students should normally be qualified radiographers, registered and currently working in general radiography where appropriate experience of reporting images of the axial skeleton can be obtained. They should have had a minimum of the equivalent of two years' full time experience in general radiography. The student will need to provide written agreement from their Radiology Department, indicating that the necessary experience required is available to achieve the competence which this module addresses.										
Co-requisites											
Excluded combinations	None										
Module Coordinator	Jane Gooch										
Parent Department	Allied Health Sciences – Diagnostic Radiography										
Parent Course	<i>PgC/PgD/MSc Radiographic Reporting OR PgC/PgD/MSc Diagnostic Imaging</i>										
Description	This module forms a component of the programme enabling the participant to achieve competence in the practice of radiographic image reporting of the axial skeleton. The majority of the study element will be in the clinical environment working with a mentor in partnership with the module coordinator to ensure all academic components are met. Participants will be										

	operating currently within the healthcare environment and must have access to the prescribed clinical practice which should include a mix of acute and non-acute axial cases for review.
JACS Code	B821
Aims	The aim of this module is to develop skills in radiographic reporting of radiographic appearances of the axial skeleton.
Learning outcomes	<p>By engaging successfully with this module the student will be able to:</p> <p>Knowledge and Understanding</p> <ul style="list-style-type: none"> • Interpret and effectively communicate the anatomical, pathological and physiological considerations related to radiographic appearances of the axial skeleton <p>Intellectual Skills</p> <ul style="list-style-type: none"> • Analyse the particular considerations of presenting patients' specific features eg. Paediatric, Geriatric. • Demonstrate understanding of the principles of examination in the orthopaedic and trauma situation. • Evaluate mechanisms of injury and their seen or expected appearances <p>Practical Skills</p> <ul style="list-style-type: none"> • Demonstrate consistent accuracy of reports that conforms with good practice. • Demonstrate the ability to discuss the radiological appearances of cases in both radiological and multidisciplinary team meetings. <p>Transferable Skills</p> <ul style="list-style-type: none"> • Understand legislation in respect of professional practice and accountability. • Demonstrate the use of reporting audit in practice (developed as part of the Foundations of Image Interpretation module). • Demonstrate multidisciplinary team working skills.
Employability	Professionals undertaking this module will be able to use their knowledge and skills to enhance the service they provide in accordance with their employer's policies. Completion of the module may be used as evidence to support career progression, to include Axial Skeleton reporting as part of an Advanced Practitioner role
Teaching & Learning Pattern	The module will be delivered via block release at the university primarily through the means of keynote lectures, seminars and workshops/small group work. Lectures will serve as a means of presenting an underpinning framework to be developed during the students' experiential learning and private study. A series of student-led threads on the discussion board and in class will enable students to engage in research and guided learning.
Indicative content	<ul style="list-style-type: none"> • All axial radiographic cases should be considered (paediatric, acute, non-acute etc.) • Radiological anatomy and pathology of the axial skeleton.

	<ul style="list-style-type: none"> • Radiological anatomy of overlying structures (mediastinum, abdomen and pelvic contents) • Observation and reporting of radiographs of the axial skeleton. • Specific considerations of image evaluation relating to the axial skeleton. • Principles of clinical evaluation of patients with trauma to the axial skeleton, mechanisms of injury, healing processes, patient management. • Appearances of degeneration, pathology and congenital defects to the skeleton. • Appearances of mediastinal, abdominal or pelvic contents that may either mimic spinal pathology or be a pathology that should be commented upon. • Overview of orthopaedics related to the axial skeleton
Assessment	<p>Formative Assessment</p> <p>Students will undertake monthly audits of reporting practice and by reflection, learn from any errors to improve accuracy over the module. In addition image interpretation tests are integrated into the module as scaffolding for the summative assessment.</p> <p>Summative Assessment</p> <p>Comprises two elements:</p> <ol style="list-style-type: none"> 1. 'Progression Test' (Pass/Fail) OSCE a student must demonstrate accuracy and achieve a mark of 95% in this element. 2. 1 hour OSCE Pass Mark 50% Weighting: 100% <p>Both elements must be passed</p>

Contact	24								
Blended (Learning and Teaching Activities)	26								
Student Managed (Independent Guided Study)	150								
Pre-requisite learning	Students should normally be radiographers with a minimum of 2 years post qualification experience however the module is also open to other healthcare professionals.								
Co-requisites									
Excluded combinations	None								
Module Coordinator	Jerry Hughes								
Parent Department	Allied Health Sciences – Diagnostic Radiography								
Parent Course	PgC/PgD/MSc Radiographic Reporting OR PgC/PgD/MSc Diagnostic Imaging								
Description	This module concentrates on the contribution of specialised modalities in confirming or contributing to the diagnosis and further investigation of musculoskeletal plain image reports. The module is of value to students studying on either Radiographic Reporting or Diagnostic Imaging award pathways but may also be taken stand-alone.								
JACS Code	B821								
Aims	<p>This module enables the participant to;</p> <ul style="list-style-type: none"> Acquire an understanding of supplementary value of CT, MR, RNI and ultrasound imaging that will complement plain film reporting of musculoskeletal structures. 								

	<ul style="list-style-type: none"> • Provide advanced imaging modality knowledge that can be applied to reporting practice. • Understand and utilise the rationales for different imaging modalities; enabling the student the appropriate clinical reasoning skills to recommend further imaging (dependent upon their department protocols)..
Learning outcomes	<p>By engaging successfully with this module the student will be able to:</p> <p>Knowledge and Understanding</p> <ul style="list-style-type: none"> • Discuss and understand the concept and accurate application (including limitations) of conventional x-ray, MRI, CT and diagnostic US in the diagnosis of musculoskeletal conditions. • Demonstrate awareness of anatomical appearances on diagnostic images of the skeletal system using imaging modalities other than plain radiography • Identify & recognise signs in images consistent with specific disorders • Evaluate the diagnostic effectiveness and role of the various imaging methods. <p>Intellectual Skills</p> <ul style="list-style-type: none"> • Analyse the particular considerations of presenting patients' in relation to CT, MR NM or ultrasound. • Demonstrate understanding of the principles of examination in CT, MR NM or ultrasound. • Evaluate mechanisms of injury and their seen or expected appearances in the alternate (eg MR,CT, NM or ultrasound) image in the axial skeleton <p>Practical Skills</p> <ul style="list-style-type: none"> • Evaluate individual cases found in work placement and make reasoned choices for further diagnostic imaging • Effectively manage the local environment for accurate viewing of diagnostic images <p>Transferable Skills</p> <ul style="list-style-type: none"> • Enable communication of a professional opinion based on the interpretation of a wide range of diagnostic imaging modalities
Employability	<p>Professionals undertaking this module will be able to use their knowledge and skills to enhance the service they provide in accordance with their employer's policies. Completion of the module may be used as evidence to support career progression, to include reporting as part of an Advanced Practitioner role</p>
Teaching & Learning Pattern	<p>The module will be delivered via block release at the university primarily through the means of keynote lectures, seminars and workshops/small group work. Lectures will serve as a means of presenting an underpinning framework to be developed during the students' experiential learning and private study. A series of student-led threads on the discussion board and in class will enable students to engage in research and guided learning.</p>
Indicative content	<ul style="list-style-type: none"> • Image generation with MRI, CT, US and RNI. • Normal appearances of specific regions in MRI & CT: Upper and lower limbs; facial bones and spine. • Selected (common/typical) abnormal appearances of specific regions in MRI & CT: Upper and lower limbs; facial bones and spine. • Joint and local soft tissue appearances in US • An overview of image interpretation for musculoskeletal diagnosis using CT, US, MRI, NM, or Hybrid
Assessment	<p>Formative Assessment</p> <p>Activities during the module will develop the necessary skills required to select suitable cases for the summative assessment. Peer and tutor review of these</p>

	<p>activities will be encouraged via the use of online discussion forums and feedback is provided via tutor, peer, and self-evaluation.</p> <p>Summative Assessments 4000 word equivalent ePoster (100% weighting)</p> <p>The ePoster will consider a range of image modalities relative to a selected pathology</p> <p>The pass mark is 50% 100% weighting.</p>

Module Title	Research in Health and Social Care (Online)	
Programme(s) / Course	MSc/PgDip Radiotherapy & Oncology MSc/PgDip Radiographic Reporting MSc/PgDip Diagnostic Imaging MSc/PgDip Advancing Practice in Occupational Therapy	
Level	7	
Semester	One or Two	
Ref No:	TAR_7_014	
Credit Value	20 credits	
Student Study hours	Total Contact Blended (Learning and Teaching Activities) Student Managed (Independent Guided Study)	200 hours Online 30 170
Co-requisites		
Module Coordinator	Dr Martin Benwell	
Parent Department	School of Health and Social Care	
Description	The purpose of this module is to consolidate and extend students' knowledge of research approaches and methods and enhance their ability to be critical users of research evidence. The module examines philosophical and theoretical perspectives underpinning health and social care research approaches including exploration of research design and key aspects of data gathering and interpretation of both qualitative and quantitative analyses. The module will develop practical skills for identifying, critical reviewing and synthesising research evidence relevant to professional practice.	
JACS Code	B900	
Aims	This module aims to develop a comprehensive understanding of key concepts and methods in health and social care research together with the skills to find, appraise and use the evidence to address policy and practice issues.	
Learning outcomes	<p>By engaging successfully with this module the student will be able to</p> <p>Knowledge and Understanding</p> <ul style="list-style-type: none"> • Recognise and discuss the contemporary philosophical issues, challenges and innovations relating to research approaches • Understand and critically discuss the principles of quantitative and qualitative research methods and their application. • Comprehensive understanding of a range of different critical appraisal tools. • Comprehensive understanding of the critical appraisal process <p>Intellectual Skills</p> <ul style="list-style-type: none"> • Critically evaluate the potential contribution of a variety of methods in answering health and social care research questions • Critically appraise and analyse published research reports independently 	

	<p>Practical Skills</p> <ul style="list-style-type: none"> • Demonstrate effective information retrieval skills using appropriate databases • Demonstrate critical appraisal skills requiring the use of appropriate tools • Demonstrate appropriate skills in writing up the critical appraisal process and conclusions. <p>Transferable Skills</p> <ul style="list-style-type: none"> • The ability to analyse and synthesise research evidence which underpins professional practice • Identification of appropriate research evidence and ways of applying this in order to inform and ultimately improve practice • Demonstration of effective written skills.
Employability	<p>Given the increasing requirement for practice in the health and social care professions to be evidence based and this evidence being largely generated by research, it can be assumed that the candidate's employment opportunities will be enhanced on completion of a research module such as this. Furthermore, now that the entry level qualification for most health and social care professions is a Bachelor's Degree, on completion of postgraduate study the student will meet the higher academic requirements for eligibility to apply for higher grade/level professional clinical and academic posts and thus enhance their employability prospects.</p>
Teaching & Learning Pattern	<p>The teaching approach will be through a combination of attendance at taught sessions that incorporate student participation, blended learning and solely student managed study and learning. Studying the module requires attendance at lectures and participation in group work leading to discussion in which students will explore the module content through the working of practical examples and through critically appraising research evidence. Students will be given the opportunity to undertake supervised literature searching exercises using computer databases.</p> <p>Moodle (VLE) LSBU's electronic learning environment will provide the main vehicle for content delivery of the Module.</p> <p>Directed reading, relevant to the programme of learning, will be indicated or provided on a regular basis.</p>
Indicative content	<ul style="list-style-type: none"> • Contemporary philosophical issues, challenges and innovations relating to research methods and paradigms • How research questions are developed • Understanding research terminology • Issues in evidence based practice including types of evidence • Techniques for finding evidence • Techniques utilized in accessing evidence to underpin professional practice • Theoretical and practical issues in research • Principles of quantitative and qualitative methods of sampling and data gathering

	<ul style="list-style-type: none"> • Analysis and interpretation of quantitative and qualitative data • Critical appraisal of evidence including introduction to a range of frameworks to support critical review • Explore the role of audit and service evaluation in supporting evidence based practice • Introduction to the purpose and processes of systematic reviews and meta-analysis and the role of such reviews in evidence based practice. • Techniques and conventions in writing a critical appraisal-based assignment
Assessment method	<p>4000 word written assignment incorporating a detailed search strategy, a literature review and critical appraisal of the evidence in a clinically relevant topic of the students choosing.</p> <p>Pass Mark – 50% Weighting - 100%</p>

Module Title	Research in Health and Social Care (Taught) (VALIDATED)	
Programme(s) / Course	MSc/PgDip Radiotherapy & Oncology MSc/PgDip Radiographic Reporting MSc/PgDip Diagnostic Imaging MSc/PgDip Advancing Practice in Occupational Therapy	
Level	7	
Semester	One or Two	
Ref No:	TAR_7_011	
Credit Value	20 credits	
Student Study hours	Total	200 hours
	Contact	30
	Student Managed (Independent Guided Study)	170
Co-requisites		
Module Coordinator	Dr Martin Benwell	
Parent Department	School of Health and Social Care	
Description	The purpose of this module is to consolidate and extend students' knowledge of research approaches and methods and enhance their ability to be critical users of research evidence. The module examines philosophical and theoretical perspectives underpinning health and social care research approaches including exploration of research design and key aspects of data gathering and interpretation of both qualitative and quantitative analyses. The module will develop practical skills for identifying, critical reviewing and synthesising research evidence relevant to professional practice.	
JACS Code	B900	
Aims	This module aims to develop a comprehensive understanding of key concepts and methods in health and social care research together with the skills to find, appraise and use the evidence to address policy and practice issues.	
Learning outcomes	<p>By engaging successfully with this module the student will be able to:</p> <p>Knowledge and Understanding</p> <ul style="list-style-type: none"> • Recognise and discuss the contemporary philosophical issues, challenges and innovations relating to research approaches • Understand and critically discuss the principles of quantitative and qualitative research methods and their application. • Comprehensive understanding of a range of different critical appraisal tools. • Comprehensive understanding of the critical appraisal process <p>Intellectual Skills</p> <ul style="list-style-type: none"> • Critically evaluate the potential contribution of a variety of methods in answering health and social care research questions • Critically appraise and analyse published research reports independently <p>Practical Skills</p> <ul style="list-style-type: none"> • Demonstrate effective information retrieval skills using appropriate databases • Demonstrate critical appraisal skills requiring the use of appropriate tools • Demonstrate appropriate skills in writing up the critical appraisal process and conclusions. 	

	<p>Transferable Skills</p> <ul style="list-style-type: none"> • The ability to analyse and synthesise research evidence which underpins professional practice • Identification of appropriate research evidence and ways of applying this in order to inform and ultimately improve practice • Demonstration of effective written skills.
Employability	<p>Given the increasing requirement for practice in the health and social care professions to be evidence based and this evidence being largely generated by research, it can be assumed that the candidate's employment opportunities will be enhanced on completion of a research module such as this. Furthermore, now that the entry level qualification for most health and social care professions is a Bachelor's Degree, on completion of postgraduate study the student will meet the higher academic requirements for eligibility to apply for higher grade/level professional clinical and academic posts and thus enhance their employability prospects.</p>
Teaching & Learning Pattern	<p>The teaching approach will be through a combination of attendance at taught sessions that incorporate student participation, blended learning and solely student managed study and learning. Studying the module requires attendance at lectures and participation in group work leading to discussion in which students will explore the module content through the working of practical examples and through critically appraising research evidence. Students will be given the opportunity to undertake supervised literature searching exercises using computer databases.</p> <p>Moodle (VLE) LSBU's electronic learning environment will provide the main vehicle for content delivery of the Module.</p> <p>Directed reading, relevant to the programme of learning, will be indicated or provided on a regular basis.</p>
Indicative content	<ul style="list-style-type: none"> • Contemporary philosophical issues, challenges and innovations relating to research methods and paradigms • How research questions are developed • Understanding research terminology • Issues in evidence based practice including types of evidence • Techniques for finding evidence • Techniques utilized in accessing evidence to underpin professional practice • Theoretical and practical issues in research • Principles of quantitative and qualitative methods of sampling and data gathering • Analysis and interpretation of quantitative and qualitative data • Critical appraisal of evidence including introduction to a range of frameworks to support critical review • Explore the role of audit and service evaluation in supporting evidence based practice • Introduction to the purpose and processes of systematic reviews and meta-analysis and the role of such reviews in evidence based practice. • Techniques and conventions in writing a critical appraisal-based assignment

Assessment method	<p>4000 word written assignment incorporating a detailed search strategy, a literature review and critical appraisal of the evidence in a clinically relevant topic of the students choosing.</p> <p>Pass Mark – 50% Weighting - 100%</p>

Pre-requisite learning	120 Level 7 credits from appropriate programme modules in the above stated Masters programmes.										
Co-requisites											
Excluded combinations	None										
Module Coordinator	Dr Chris Wright										
Parent Department	Allied Health Sciences										
Parent Course	<i>MSc Diagnostic Imaging</i> <i>MSc Radiographic Reporting</i> <i>MSc Advancing Practice in Occupational Therapy</i> <i>MSc Radiotherapy and Oncology</i>										
Description	This module enables the student to plan and conduct an in-depth investigation of a topic that contributes to professional practice. It provides the opportunity to apply an understanding of research methods to the investigation and allows demonstration of their ability to work with relative autonomy in undertaking a sustained, in-depth piece of independent learning. It promotes the dissemination of findings to the relevant professional community.										
JACS Code	B990										
Aims	<ul style="list-style-type: none"> • To enable students to identify a topic area for original enquiry in a chosen area of professional practice. • To provide students with the necessary research skills to undertake a research/work-based project or systematic review. • To support students in the practical and ethical aspects of undergoing a research/work-based project or systematic review 										

	<ul style="list-style-type: none"> To enable students to take responsibility for their own learning through self-directed study and supervised dissertation preparation based on critical awareness and self-evaluation.
Learning outcomes	<p>On completion of this module, students will be able to:</p> <p>Knowledge and Understanding:</p> <ul style="list-style-type: none"> Critically discuss the values and assumptions underlying research paradigms and approaches which inform the evidence base of professional practice. Demonstrate knowledge and understanding of the ethical and governance dimensions of research. Understand how evidence is used in evaluation, audit and policy making and how it influences the research and development agenda. <p>Intellectual Skills:</p> <ul style="list-style-type: none"> Undertake in a rigorous manner a major piece of independent work, designed to examine an aspect of professional practice. Transfer research-based knowledge and skills into the development of practice. Critically appraise, analyse and interpret research and other evidence. Disseminate findings in written format. <p>Practical Skills:</p> <ul style="list-style-type: none"> Employ effective strategies, knowledge and the confidence necessary to apply and reflect on theory, research and evidence in the workplace. Employ effective strategies, knowledge and skills necessary to manage a research project or original inquiry. <p>Transferable Skills:</p> <ul style="list-style-type: none"> Develop the ability to write a feasible high quality proposal. Demonstrate research skills through the identification, retrieval and critical analysis of published material. Demonstrate oral and written communication skills that enable dissemination of the findings of the project.
Employability	<p>On completion of this module (and the MSc award) the student will meet the higher academic requirements for eligibility to apply for higher grade/level professional clinical and academic posts and thus enhance their employability prospects, including the potential for promotion.</p>
Teaching & Learning Pattern	<p>The emphasis in this module is on learning through independent and autonomous study.</p> <p>A dissertation supervisor will be allocated who will provide the student with academic and professional support and guidance regarding the selection of the research topic, the methodology/research methods, data analysis, and preparation for submission/publication.</p>

Indicative content	<ul style="list-style-type: none"> • Developing a research question and research proposal • Literature searching and selection skills • Research governance and ethical submission procedures • Research design • Data collection and synthesis skills • Data analysis skills (including use of SPSS and qualitative analysis methods where appropriate for the project)
Assessment	<p>The assessment has two options:</p> <ol style="list-style-type: none"> 1. A 12,000 word dissertation research/work-based project such as service evaluation or audit. 2. A 12,000 word dissertation mini systematic review – a review that aspires to the rigour of a Cochrane review but recognises the student has time limits. 3. An academic paper suitable for publication in a peer-reviewed Journal (approx. 5,000 words) plus literature review (5,000 words). <p>The pass mark is 50%. Weighting = 100%</p>

Module Coordinator	Dr Nicola Thomas
Parent Department	Adult Nursing and Midwifery
Parent Course	The course where the module belongs, unless it is a stand-alone module.

Description	This module provides the student with the opportunity to undertake original enquiry in a chosen area of professional practice, either through a systematic review of the literature or a research/work-based project such as service evaluation or audit. Students will be able to consolidate and extend their knowledge and understanding of research and evaluation design and associated methods of enquiry during six taught sessions. They will subsequently be supported by a named supervisor to develop the practical skills necessary to plan and carry out their chosen project.
JACS Code	B990
Aims	<p>To enable students to identify a topic area for original enquiry in a chosen area of professional practice.</p> <p>To provide students with the necessary research skills to undertake a research/work-based project or systematic review.</p> <p>To support students in the practical and ethical aspects of undergoing a research/work-based project or systematic review.</p> <p>To enable students to take responsibility for their own learning through self-directed study and supervised dissertation preparation based on critical awareness and self-evaluation.</p>

Module Title	Dissertation – Allied Health Sciences (40 Credits - Taught)	
Course(s)	<i>MSc Diagnostic Imaging</i> <i>MSc Radiographic Reporting</i> <i>MSc Advancing Practice in Occupational Therapy</i> <i>MSc Radiotherapy and Oncology</i> <i>MA Practice Education</i> <i>MSc Advancing Practice in Occupational Therapy</i> <i>MSc Adult Nursing</i> <i>MSc Advanced Nurse Practitioner</i> <i>MSc Childrens Nursing</i> <i>MSc Healthcare</i> <i>MSc Leadership and Service Improvement in Healthcare</i> <i>MSc Mental Health Nursing</i> <i>MSc Public Health and Health Promotion</i> <i>MSc Midwifery</i>	
Level	7	
Semester	1 and 2	
Ref No:	AHP_7_064	
Credit Value	40 credits	
Student Study hours	Total	400 hours
	Contact	18
	1 to 1 Supervision:	9
	Blended learning:	73
	Student Managed Learning:	300
Pre-requisite learning	140 Level 7 credits from appropriate programme modules in the above stated Masters programmes.	
Co-requisites		
Excluded combinations	None	
Module Coordinator	Dr Nicola Thomas	
Parent Department	Adult Nursing and Midwifery	
Parent Course	<i>The course where the module belongs, unless it is a stand-alone module.</i>	
Description	This module enables the student to plan and conduct an investigation of a topic that contributes to professional practice. It provides the opportunity to apply an understanding of research methods to the investigation and allows demonstration of their ability to work with relative autonomy in undertaking a sustained, in-depth piece of independent learning. It promotes the dissemination of findings to the relevant professional community.	
JACS Code	B990	

Aims	<ul style="list-style-type: none"> • To enable students to identify a topic of contemporary practice or an area for original enquiry. • To provide students with the necessary skills to undertake a research/work-based project or critical review. • To encourage students to engage with the complexity of developing and delivering contemporary practice • To enable students to take responsibility for their own learning through self-directed study and supervised dissertation preparation based on critical awareness and self-evaluation.
Learning outcomes	<p>On completion of this module, students will be able to:</p> <p>Knowledge and Understanding:</p> <ul style="list-style-type: none"> • Critically discuss the values and assumptions underlying research paradigms and approaches which inform the evidence base of professional practice. • Demonstrate knowledge and understanding of the ethical and governance dimensions of research informed practice. • Understand how evidence is used in evaluation, audit and policy making and how it influences the research and practice development agenda. <p>Intellectual Skills:</p> <ul style="list-style-type: none"> • Apply research-based knowledge and skills to the development of practice. • Critically appraise research and other forms of evidence. <p>Practical Skills:</p> <ul style="list-style-type: none"> • Employ effective strategies, knowledge and reflection to evidence informed practice. • Employ effective strategies, knowledge and skills to manage an independent project. <p>Transferable Skills:</p> <ul style="list-style-type: none"> • Scope a feasible study of relevance to practice. • Demonstrate research skills through the identification, retrieval and critical analysis of published material. • Demonstrate written communication skills that enable dissemination of the findings of the project.
Employability	<p>On completion of this module (and the MSc award) the student will meet the higher academic requirements for eligibility to apply for higher grade/level professional clinical and academic posts and thus enhance their employability prospects, including the potential for promotion.</p>
Teaching & Learning Pattern	<p>The emphasis in this module is on learning through independent and autonomous study.</p> <p>A dissertation supervisor will be allocated who will provide the student with academic and professional support and guidance.</p>

Indicative content	<ul style="list-style-type: none"> • Developing a feasible study proposal • Literature searching and selection skills • Research and ethical governance • Research or protocol design • Data or source capture and synthesis skills • Writing for publication & dissemination
Assessment	<p><u>Option 1</u></p> <p>Literature Review (5,000 words) on an aspect of contemporary practice. PLUS 3,000 word report analysing the literature review in relation to the delivery of contemporary practice</p> <p><u>Option 2</u></p> <p>4,000 word research based academic paper suitable for publication in a peer-reviewed journal PLUS 3,000 word essay critiquing the literature</p> <p>Pass mark is 50%. Weighting = 100%</p>

Module Title	CPPD for academic development
Course(s)	<i>Standalone</i> <i>MSc Diagnostic Imaging</i> <i>MSc Radiographic Reporting</i> <i>MSc Advancing Practice in Occupational Therapy</i> <i>MSc Radiotherapy and Oncology</i> <i>MA Practice Education</i> <i>MSc Advancing Practice in Occupational Therapy</i> <i>MSc Adult Nursing</i> <i>MSc Advanced Nurse Practitioner</i> <i>MSc Childrens Nursing</i> <i>MSc Healthcare</i> <i>MSc Leadership and Service Improvement in Healthcare</i> <i>MSc Mental Health Nursing</i> <i>MSc Public Health and Health Promotion</i> <i>MSc Midwifery</i>
Level	7
Semester	1 & 2
Ref No:	WBL_7_003
Credit Value	20
Student Study hours	Contact hours: 4 hours Blended learning hours: 46 hours Student managed learning hours: 150 hours Placement hours: N/A
Pre-requisite learning	Students undertaking this module are already employed within the field of health and social care. Students who have not previously undertaken study at academic Level 7 (Masters level) are advised to consider the module: Preparation for Masters Level Study (see CPPD online prospectus for more details).
Co-requisites	None
Excluded combinations	None
Module Coordinator	Name: Rachel Picton Email: pictonr@lsbu.ac.uk
Parent Department	AHS
Parent Course	Standalone
Description	This work-based learning module enables students to gain academic credits for CPPD undertaken. The module aims to support the development of higher level academic skills, in particular critical reflection and the ability to appraise the evidence and apply it to the student's area of practice. Students are expected to develop a portfolio of evidence to support this,
JACS Code	
Aims	<ul style="list-style-type: none"> To allow students to develop more specialist knowledge in their area of choice To further develop student's skills in appraising the evidence in their area of choice, and applying this to their practice

	<ul style="list-style-type: none"> To enable critical reflection and encourage students to consider their own continued development needs in light of their area of practice
Learning outcomes	<p>On successful completion of the module, students will be able to:</p> <p>Knowledge and Understanding:</p> <ul style="list-style-type: none"> Demonstrate systematic knowledge of the evidence base pertaining to an area of study relevant to their workplace <p>Intellectual Skills:</p> <ul style="list-style-type: none"> Critically appraise and synthesise the evidence base in the chosen area of study and apply this to practice. Critically reflect upon the learning undertaken and the impact of this on their personal and professional development. <p>Practical Skills:</p> <ul style="list-style-type: none"> Demonstrate verbal communication skills in discussing evidence and defending professional decisions/understanding in their chosen area. <p>Transferable Skills:</p> <ul style="list-style-type: none"> Demonstrate the ability to identify learning needs and take action to address these Demonstrate skills in self-management and continuing personal and professional development
Employability	The module can be used by the student to enhance their knowledge of a subject relevant to their work, which will inherently meet the needs of the workforce and enhance employability and effectiveness in their current and future roles.
Teaching & Learning Pattern	<p>Contact hours includes the following: (please click on the checkboxes as appropriate)</p> <p><input type="checkbox"/> Lectures <input type="checkbox"/> Group Work: <input type="checkbox"/> Seminars <input checked="" type="checkbox"/> Tutorial: <input type="checkbox"/> Laboratory <input type="checkbox"/> Workshops <input type="checkbox"/> Practical <input checked="" type="checkbox"/> VLE Activities</p>
Indicative content	<p>Students will however be expected to:</p> <ul style="list-style-type: none"> Demonstrate engagement in self directed study in a specified area relevant to their workplace, reflective of the study hours required of the module. Demonstrate evidence of subject-specific educational activities (e.g. non accredited training) in their chosen area of study Collate information from their reading and other learning activities to demonstrate their understanding theory and practice in their chosen area of study Critically reflect on their learning
Assessment	<p>Formative assessment: Develop and submit a portfolio plan, detailing how the student can demonstrate the required hours of learning for the module</p> <p>Summative assessment: 1: A portfolio of work demonstrating 150 hours of self-directed study in a chosen area relevant to the student's place of work. This must demonstrate critical reflection</p>

	<p>and well as demonstrating the student's ability to search and use the relevant literature in practice. 50% Weighting</p> <p>2: A 20 minute professional conversation, which discusses at least 4 pieces of evidence from the portfolio, demonstrating the students ability to critically appraise , synthesise and apply the literature to their chosen area of practice. 50% weighting</p>
